PowerPad Keys

Use the following keys in PowerPad.

Moving the Insertion Point

Key(s)	Function
Up Arrow	Moves up one line.
Down Arrow	Moves down one line.
Right Arrow	Moves right one character.
Left Arrow	Moves left one character.
Ctrl + Right Arrow	Moves right one word.
Ctrl + Left Arrow	Moves left one word.
Home	Moves to the beginning of the line.
End	Moves to the end of the line.
PgUp	Moves up one window.
PgDn	Moves down one window.
Ctrl + Home	Moves to the beginning of the file.
Ctrl + End	Moves to the end of the file.

Selecting Text

Key(s)	Function
Shift + Left or Right Arrow	Selects text one character at a time to the left or right. Or, if the character is already selected, cancels the selection.
Shift + Down or Up	Selects one line of text up or down. Or, if the line is already selected, cancels the selection.
Shift + PgUp	Selects text up on window. Or, if the previous window is already selected, cancels the selection.
Shift + PgDn	Selects text down one window. Or, if the next window is already selected, cancels the selection.
Shift + Home	Selects text to the beginning of the line.
Shift + End	Selects text to the end of the line.
Ctrl + Shift + Left Arrow	Selects the previous word.
Ctrl + Shift + Right Arrow	Selects the next word.
Ctrl + Shift + Home	Selects text to the beginning of the file.
Ctrl + Shift + End	Selects text to the end of the file.

[Viewing File Statistics](#)

New command - File Menu

Creates a new file.

If the current file has been changed since it was last saved, PowerPad asks you if you would like to save the changes before it creates a new file.

When you save the file, PowerPad prompts you for the file name and path.

Related Topics:

[Creating New Files](#)

Open command - File Menu

Opens and existing file.

If the current file has been changed since it was last saved, PowerPad asks you if you would like to save the changes before it lets you select a new file to open.

When you open a file, the file name appears in the caption bar of the main PowerPad window.

PowerPad can Open any file, provided that it contains only text with no special formatting characters besides tabs and carriage returns. PowerPad has a file size limit of exactly 45,000 characters.

Related Topics:

[Opening Existing Files](#)

Merge command - File Menu

Merges the text of an existing file into the file currently being edited at the insertion point.

PowerPad can Merge any file that it can otherwise Open, provided that the resulting file would be within the 45,000 character limit.

Related Topics:

[Merging Existing Files](#)

Save command - File Menu

Saves any changes to the current file.

If the file was created with the File\New command, PowerPad will prompt you for a file name and path.

After the file is saved, it remains open so that you can continue editing.

Related Topics:

[Saving Files](#)

Save As command - File Menu

Saves a new or existing file.

Save As allows you to:

- * Name a new file, or
- * Save a file with a new name, without changing the original file.

After the file is saved, it remains open so that you can continue editing. The name in the caption bar will be changed to reflect the new name of the file.

Related Topics:

[Saving Files](#)

Preferences command - File Menu

Allows the user to view and modify File Preferences.

File Preferences include the default file extensions that appear in the File\Open and File\Merge dialog boxes, as well as the default file name for saving unnamed files.

The file preferences will be saved in the PowerPad configuration, so that they will be in effect in future PowerPad sessions.

Related Topics:

[Setting File Preferences](#)

Print command - File Menu

Prints one copy of the current file.

The 'Printing' dialog box displays the current file name, as well as the device and port that the file is being printed to.

You can cancel the Print operation from the 'Printing' dialog if you wish.

Related Topics:

[Printing Files](#)

[Changing Printers and Printer Options](#)

[Printing Headers and Footers](#)

[Setting Margins](#)

Page Setup command - File Menu

Allows you to set the headers and footers for printed output, as well as printed page margins.

You can specify:

- * Margins, or
- * Headers or Footers, by text and/or code.

Header and Footer codes:

Code	Description (format)
&f	File Name (FILENAME.EXT)
&p	Page Number
&d	Date (MM/DD/YY)
&t	Time (HH:MM)
&l	Left justify text or codes that follow
&r	Right justify text or codes that follow
&c	Center text or codes that follow

The codes and text can be combined for complex headers and footers. For example:

```
&lYourName&c&f&rPage &p
```

would produce a header or footer with 'YourName' at the left margin, the file name in the center, and the word 'Page' followed by a space and the page number at the right margin.

The header, footer, and margins will be saved in the PowerPad configuration, so that they will be in effect in future PowerPad sessions.

Related Topics:

[Printing Headers and Footers](#)

[Setting Margins](#)

Printer Setup command - File Menu

Sets printer options for PowerPad.

Printer Setup allows you to select the current printer for PowerPad.

Printer Setup also allows you to change the options for a printer. The options will vary depending on the type of printer.

If the printer is not selected prior to printing, PowerPad uses the printer that was defined as the default by Windows setup or the control panel.

Related Topics:

[Printing Files](#)

[Changing Printers and Printer Options](#)

Exit command - File Menu

Closes the current file and exits PowerPad.

If the current file has been changed since it was last saved, PowerPad asks you if you would like to save the changes before it exits.

The current window size, position, and state (maximized, etc) will be saved in the PowerPad configuration, and they will be used as the defaults for the next PowerPad session.

Undo command - Edit Menu

Undo the last editing action.

You can Undo text edits or cut and paste operations. If the action cannot be undone, Undo appears dimmed in the Edit menu.

Related Topics:

[Undoing Edits](#)

Cut command - Edit Menu

Deletes selected text from the current file and places it onto the Clipboard, replacing the previous Clipboard contents.

You can use Paste to place the Clipboard text in the same file, another file, or another application.

Related Topics:

[Cutting Text](#)

[Pasting Text](#)

[Deleting Text](#)

Copy command - Edit Menu

Copies selected text from the current file and places it onto the Clipboard, replacing the previous Clipboard contents. The current file remains intact.

You can use Paste to place the Clipboard text in the same file, another file, or another application.

Related Topics:

[Copying Text](#)

[Pasting Text](#)

Paste command - Edit Menu

Pastes a copy of the current Clipboard contents at the insertion point, or replaces any selected text with the Clipboard contents.

Related Topics:

[Cutting Text](#)

[Copying Text](#)

[Pasting Text](#)

Delete command - Edit Menu

Deletes selected text from the file.

The Clipboard is not affected by this action. Use delete to delete text when you want to keep the Clipboard contents intact.

Related Topics:

[Deleting Text](#)

Select All command - Edit Menu

Selects all of the text in a file.

Use Select All to quickly select all of the text in a file so that you can delete it or copy it to the Clipboard.

Related Topics:

[Selecting All the Text in a File](#)

Tabs command - View Menu

Sets the Tab stop for PowerPad.

PowerPad prompts you for the new Tab stop. The range must be from 1 to 20 spaces. The Tab stop is repeated. For example, if the Tab stop is 8, the Tabs will be every 8 spaces.

The Tab stops will be saved in the PowerPad configuration, so that they will be in effect in future PowerPad sessions.

Related Topics:

[Setting Tab Stops](#)

Wordwrap command - View Menu

Turns word wrapping on or off.

Word wrapping is when PowerPad automatically breaks lines of text so that the entire line is shown in the current window.

Wordwrap is turned on when a check mark is displayed next to the Wordwrap menu item in the View menu. Selecting the Wordwrap menu item toggles the Wordwrap state.

The Wordwrap state (on or off) will be saved in the PowerPad configuration, so that it will be in effect in future PowerPad sessions.

Related Topics:

[Wrapping Text](#)

Find command - Search Menu

Find searches for characters, words, or phrases in a file.

You can specify these options:

- * Find what - enter the text to be searched for.
- * Whole word - select this box to specify that the text must be delimited by a non-alphanumeric character in order to qualify.
- * Match Upper/Lowercase - select this box to specify that the text must match based on upper and lower case in order to qualify.
- * Forward or Backward - select the direction of the search from the insertion point or current selection.

PowerPad will use any selected text (if the selection is less than 40 characters) as the default for 'Find What'. If no text is selected, the 'Find What' from the previous find is used as the default.

PowerPad displays a message if the beginning or end of a file is reached without finding the specified text.

Related Topics:

[Finding Text](#)

Repeat Find command - Search Menu

Repeat Find repeats the previous Find command.

Related Topics:

[Finding Text](#)

Change command - Search Menu

Change searches for characters, words, or phrases in a file and replaces occurrences with specified text.

You can specify these options:

- * Find what - enter the text to be searched for.
- * Change To - enter what the text should be changed to.
- * Whole word - select this box to specify that the text must be delimited by a non-alphanumeric character in order to qualify.
- * Match Upper/Lowercase - select this box to specify that the text must match based on upper and lower case in order to qualify.
- * Confirm Changes - select this box if you want to manually verify each change before it is made.

PowerPad will use any selected text (if the selection is less than 40 characters) as the default for 'Find What'. If no text is selected, the 'Find What' from the previous find is used as the default.

Change searches forward from the insertion point or selected text. When the end of file is reached, PowerPad asks you if you would like to continue the Change operation from the beginning of the file.

PowerPad returns a count of the number of occurrences changed at the completion of the Change procedure.

Related Topics:

[Changing Text](#)

Goto Line command - Search Menu

Goto Line locates and selects a desired line by line number.

Choose the Goto Line command and enter the line number. PowerPad will warn you if the line number is invalid.

Related Topics:

[Viewing File Statistics](#)

<Command> - Run Menu

Selecting a user defined command from the Run menu causes that command to be executed by Windows.

Related Topics:

[Configuring the Run Menu](#)

[Using the Run Menu](#)

Options command - Run Menu

Run Options allows the user to define commands to be executed by Windows.

Enter the Menu Item title that you wish to appear in the Run menu, and the desired command as you would from the Program Manager Run command.

If the Menu Item and the Command are valid, the menu item will appear on the Run menu.

The user defined Run commands will be saved in the PowerPad configuration, so that they will be in effect in future PowerPad sessions.

Registering PowerPad

PowerPad is offered as shareware. It is NOT FREE and it is NOT PUBLIC DOMAIN. If you use PowerPad after your initial evaluation you are obligated to register it.

To register PowerPad:

1. Select the About... command from the Help menu.
2. Choose the Registration button.
3. Follow the Registration instructions.
4. Choose OK.

Registration of this product will ensure future releases of this product with desired enhancements, and of other new and useful products.

Registration of any version of PowerPad will cover all future versions of PowerPad as well.

Related topics:

[About PowerPad command](#)

Using the Mouse to Select Text

Text selection with the mouse works like any other windows application with the following exceptions:

Right Mouse Button click:

The right mouse click will extend the selection from the insertion pointer to the point of the mouse when the right button was clicked. This is the same as using a Shift-Left click.

Left Mouse Button double-click:

The left mouse button double click selects the word or whitespace that is currently under the mouse pointer. The word selection uses and non-alpha numeric character as a word separator, including spaces, tabs, and carriage returns. The white space selection uses any character other than space or tab as a separator.

Note: These rules differ from standard Windows text selection. They are intended to help you select and edit text more quickly and efficiently.

Selecting All the Text in a File

To select all of the text in a file:

* Choose the Select All command from the Edit menu.

Related topics:

[Select All command](#)

Creating New Files

To create a new file:

* Choose the New command from the File menu.
