# Puzzle v1.2

To install Puzzle, simply copy the puzzle.exe and puzzle.hlp files onto your disk. Puzzle expects the help file, puzzle.hlp to either be located in the same directory as puzzle.exe, or where the other Windows Help files are stored.

There have been several improvements over version 1.0 and 1.1, most notably the ability to load and save bitmap files, an improved help system, lower memory requirements, an autosolve feature, more variations in pattern and color, preferences saved in win.ini, and a few more...

All documentation for Puzzle is contained within the help system.

I would like to hear of any suggestions, or of any reports of problems with Puzzle (all versions), and I can be contacted as detailed in the 'About Puzzle...' dialog box.
