\$RCSfile: ToDo.doc \$

Description: Planned changes and additions to Oberon-A

Created by: fjc (Frank Copeland)

\$Author: fjc \$

\$Date: 1995/07/02 16:56:50 \$

Bugs to be fixed

ORU

- * Totally confused when a symbol file is encountered twice.

Planned improvements

OC

- * Add ARexx interface.
- * Resident symbol files to speed up compilations.
- * Implement register parameters.
- * Implement definition-only modules.
- * Add a branch optimisation phase.
- * Reconsider how pointers to open arrays are handled as procedure results.
- * ?? Allow ARRAY OF SYS.BYTE value parameters. ??

Examples

- * Write some.
- * Then write some more.
- * Port some of the AMOK code and document how it should be done.
- * Port some C examples and document how it should be done.

FPE

This is showing signs of its ad-hoc development. Its compiler independant design is also unnecessary. It will be scrapped and

replaced with an Oberon-A-specific environment written from scratch, using Kickstart 2.0+ features such as GadTools.

BLink

I have had it confirmed that BLink produces lots of Enforcer hits on high-end systems. I will have to find a replacement, or write one myself.

Texts

- * Finish C2Oberon.txt.
- * Write a tutorial for getting started with Intuition, etc.
