Welcome to A World Alive!

We hope you enjoy this product.

This product uses Apple Computer's QuickTime for Windows as its video playback mechanism. If you are experiencing problems with the video clips in *A World Alive*, please refer to the following list from Apple which discussus compatibility issues for many sound and video cards.

QuickTime for Windows 1.1.1 Hardware Compatibility List November 30, 1993

This document is meant to be an aid to developers who are working with and distributing QuickTime for Windows per their license agreement. The list is by no means comprehensive but has grown substantially over the past year. The Video and Audio Hardware adapters are divided into three basic classifications Supported, Compatible and Incompatible.

- o Supported hardware/driver combinations are those that have been tested as part of the QTW development plan and are considered benchmarks to the product.
- o Compatible hardware/drivers are those combinations that have been tested but not as thoroughly as Supported items but appear to function adequately.
- o Incompatible hardware/driver combinations are those recognized as having significant problems in appearance or behavior with QTW.

Another category that we've added to our report is Optimized.

Optimized video hardware/driver combination allows QTW to write directly to the video memory speeding up video performance significantly.

When ever possible the Name of the manufacture, product name, driver date or version when known, and depth in the case of video drivers is listed.

Supported Video

Adapter	Driver	Depth	Resolution	Optimized?		
Standard VGA	Windows VGA	4	640x350	No		
Standard EGA	Windows EGA	4	640x480	No		
IBM 8514	Windows	8	1024x768	No		
IBM XGA IBM XGA	07/27/92 07/27/92	4 16	640x480 1024x768	No No		
Only XGA20 supports 16-bit color. Do NOT use the drivers supplied with Windows 3.1. Instead, use the drivers supplied by IBM.

Compatible Audio

Adapter	Driver	date		
Creative Labs ThunderBoard Creative Labs ThunderBoard	SNDBLST2.DRV SNDBLST2.DRV	03/10/92 05/13/92		
Creative Labs Sound Blaster 2.0 Sound 'Sticks' with this driver.		02/16/93		
Digispeech PortAble Sound Plus	PRTSND.DRV	04/14/93		
IBM M/Audio ACPA.DRV 10/29/92 11:38 Adjusting the volume from the Movie Controller may cause the volume to be muted. To restore the volume, stop and restart the movie. Sound may skip when resizing window. Sound is played at 44khz by doubling the samples.				
IBM M/Audio Limited volume control from keyboard.	ACPA.DRV	8/28/92		
MediaVision Thunder and Lightning Make the following modifications to the [Sound] RequestedRate=22222		08/25/92		

In-Compatible Video

ATI VGAWONDER XL24 07/29/92 24 640x480 Yes In the 24 bit mode (16 Million Colors) Reds and Blues seem to be reversed .

ATG CatsEye/X

Field reports of systems hanging when movies are played with is board.

Compaq Q-Vision

We have field reports that QTW does not work with is card.

Diamond SpeedStar 24 * 04/14/92 24 640x480 Yes Movies render as a thin line at the top of the screen in 24 bit mode. All other functions are normal.

MediaVision

We have a field report that QTW does not work with the original MediaVision video display adapter. The report indicates that the movies sound is played but the movie can not be seen. Problem persists when Optimize is set to driver

OmiCorp Texan

We have field reports of sound but no movie (video) with this card.

Packard Bell

We have several field reports dealing with a Packard Bell. Reports of a "shutters" type effect on local bus systems have been noted. The shutters effect is where a few lines of movie can be seen, then a few lines of background, then a few lines of movie, and so on. The reports also state that the image is also shifted down and to the right about 10 pixels.

Further reports tell of a lack of Movie image when running on Local Bus Packard Bell Machines.

Sigma WindStorm	08/21/92	8	1024x768	No
Sigma WindStorm	08/21/92	16	800x600	No
Sigma WindStorm	08/21/92	8	800x600	No
Sigma WindStorm	08/21/92	24	640x480	No
Sigma WindStorm	08/21/92	16	640x480	No
Sigma WindStorm	08/21/92	8	640x480	No

QTW has very poor performance with is adapter.

Video 7 SPEA 7 OEM

We have field reports that the Optimize = Driver must added to the QTW.INI before the movie will appear in the movie window frame. Audio and all other actions seems to be OK with out the change

Incompatible Audio

Media Vision Thunder and Lighting *

QTW has very poor through-put with this card.

Media Vision CDPC *

QTW does not work well with is system with movies over 10 seconds in length.

Media Vision CDPC II

QTW does not work well with is system with movies over 10 seconds in length.

Sigma Design WinStorm 8/21/92

Very poor QTW performance when running audio and video together.

Tandy 'Gold Card'

Only one unconfirmed report on this line of cards. A developer states that he has a Tandy "Gold Card" and QTW crashed when ever he tries to play a movie. Removing the card seems to fix the problem.

MODIFYING QTW.INI FOR COMPATIBILITY

NOTE: Modification of the QTW.INI file should be done at your own risk. Typically one does not need to make any modifications to this file. For some compatibility issues, modifying the file will make video or audio cards work properly, but with reduced performance. Be sure to make a backup of the QTW.INI file before modifying it.

The most common modification to the QTW.INI is to change the [Video] setting to Optimize =

Driver. This may resolve severe compatibility problems with a specific video card but will also reduce the performance of Movie playback.

Once, again modify at your own risk.

[Video] (in order of priority)

Optimize = Hardware (default)

Driver BMP RAW DIB

[Video Optimize] This is not used

[Override] // group

DREF = no or yes {NO forces QTW to use the file as self referencing, useful for QT 1.0 files}

[Data Handler]

CDROM Xfer Rate* = [integer] ranges from 100 to 600, where number is in K, default is 328. CDROM Seek TIme* [integer from 0 to X] where x is 100 to 350 in ms for average seek, default is 200.

CDROM Block Size = [integer, expressed in K] default is 8, range is 1 to 64.

Max Open Files =[integer] default is 64.

Max Consumers = [integer] usually same as Max Open Files. You can have multiple consumers per file.

Max Cache Size = [integer] expressed in K, default is 128, ranges from 64 to 512.

Disk Xfer Rate = [integer] same as CDROM Xfer Rate, default is 300.

Disk Seek Time [integer] expressed in millisecond s per average seek, default is 35.

Disk Block Size = [integer, expressed in K] default is 16, range is 1 to 64.

Network Xfer Rate = [integer] same as CDROM Xfer Rate, default is 250

Network Seek time [integer] expressed in millisecond s per average seek, default is 40.

Network Block Size = [integer, expressed in K] default is 16, range is 1 to 64.

Floppy Xfer Rate = [integer] same as CDROM Xfer Rate, default is 18.

Floppy Seek time [integer] expressed in millisecond s per average seek, default is 100.

Floppy Block Size = [integer, expressed in K] default is 2, range is 1 to 64.

[Sound]

Requested Rate = [integer] ranging from 5000 to 44000 (has to be exact rate for MPC cards)
Actual Rate = same possible rates as requested

END OF QUICKTIME FOR WINDOWS 1.1 1 READ ME

^{*} Set dynamically by QuickTime for Windows, based on what it senses as the CD-ROM speed.
