About Quick Reference (Web Dialer Example)

The Quick Reference Floating Palette gives you quick access to general news and information web sites, as well as a number of web sites of special interest to Windows developers.

Click "Category" to view different lists of web sites.

If the palette is in the way, click the **Minimize** button. You will be able to access the palette again from a floating icon (under Windows 3.1 or NT 3.51) or the Windows 95 Task bar.

"Quick Reference" is a Windows help file which uses an on-top secondary window and was created using HelpBreeze 2.0 and Netscape Navigator. Because this help file uses a demonstration version of Web Dialer, you may see a "For Evaluation Only" message from time to time. If you see this message, just press OK. You are welcome to retain this utility for your own use if you find it useful.
