Type-Designer Installation

With the Type-Designer installation program you install Type-Designer on your harddisk. This way, all necessary files are copied to the appropriate subdirectories. Also, the initialization files of both Windows and the Adobe Type Manager are adjusted automatically if necessary.

You only have to define the following directories. If a directory does not yet exist, it will be created by the installation program. If an error occurs during installation, an error message will appear and the installation program will be aborted.

Start the program again after you have corrected the error.

Directories

Type-Designer directory:

Enter here the directory where you would like to install Type-Designer.   The default setting is `C:\TD`.

Type1 font directory:

Enter here the directory where you normally store your Type1 fonts. The default setting is: `C:\PSFONTS`.

PFM directory:

Enter here the directory where the **P**rinter **F**ont **M**etric files for Type1 fonts should be saved. The default setting is `C:\PSFONTS\PFM`.

AFM directory:

Enter here the directory for the Adobe Font Metric files. The default setting is `C:\PSFONTS\AFM`.

HPSoft directory:

Enter here the directory containing those bitmap fonts you would like to use as background. The default setting is `C:\PCLFONTS`.
