World Best TSR tip sheet

Print this file and use it for reference.

Valid World Best TSR installation commands are:

    WBTSR I   to install
    WBTSR R   to remove
    WBTSR U   to uninstall (same as remove)
    WBTSR I 0   to install with alternative hot key
                    number 0
          (there is no such hot key - valid hot key numbers
          are 1..9 . To choose an alternative hot key, see
          the full documentation in the installation chapter.
          It is too extensive to summarise here.)

WBP.COM is a non-TSR demonstration version of the TSR. Being
free from memory constraints, its file manager is more power-
ful than that of the TSR. WBP requires the same command line
parameters as the TSR. Some ON/OFF features depend on the
TSR's installed event handlers, and so will have no useful
function although you can turn them on & off in the menu.

To run WBP select F6 in the tutorial menu
          or type WBP XXX at the DOS prompt.
XXX suppresses the copyright warning.

-------- Useful tips when using the programs --------------

To return to the main menu from any file manager menu,
press TAB or F10 .

To go to a different disk while in the file manager, press
TAB or F10, then the drive letter of the disk you want.

To enter a subdirectory, put the cursor on it, then
press ENTER. To leave a subdirectory, press '.' then ENTER.

To examine the contents of a file, put the cursor on it,
then press ENTER.
