

## ALCUNI PROTOTIPI METODI JDBC

Class.forName("nomeDriver")

### DriverManager

Connection getConnection(String,String,String)

### Connection

Statement createStatement()

PreparedStatement prepareStatement(String)

void setAutoCommit(boolean)

SQLWarning getWarnings()

void commit()

void rollback()

void close()

### Statement

ResultSet executeQuery(String)

Int executeUpdate(String);

SQLWarning getWarnings()

Void close()

### PreparedStatement

ResultSet executeQuery(String)

Int executeUpdate(String);

void setXXX(int,XXX)

SQLWarning getWarnings()

void close()

### ResultSet

boolean next()

XXX getXXX(int)

XXX getXXX(String)

SQLWarning getWarnings()

void close()

### SQLException

String getSQLState()

int getErrorCode()

String getMessage()

SQLException getNextException()

### SQLWarning

String getSQLState()

int getErrorCode()

String getMessage()

SQLWarning getNextWarning()
