ABOUT AURORA TECHNOLOGIES

Aurora Technologies is a pioneer of Node-Resident Networking solutions.
The company's products, which include terminal and communications servers,
routers, and internet access packages, are widely used in networks around
the world. Aurora Technologies is headquartered in Waltham, Massachusetts.

NODE-RESIDENT NETWORKING AT A GLANCE

Node-Resident Networking refers to any network connectivity or
access solution that uses the facilities of a workstation or server,
instead of requiring a separate device. Because a Node-Resident
solution uses workstation capabilities to connect to the LAN, it
results in many benefits:

* Better network performance
* Ease of use and administration
* Leveraging of existing equipment
* Security consistent with your workstations
* Substantial cost savings
