

SPARC System Printer/Peripheral Servers

The Aurora family of SPARC system printer and peripheral servers allows LAN users to share network resources without the expense of redundant peripherals. For as low as \$150, hundreds of users can share printers, modems, plotters, and any other Centronics parallel or RS-232 serial device.

Features

- Up to six peripheral connections from a single SBus slot
- Compatible with any off-the-shelf serial and parallel peripherals
- Parallel port output up to 500,000 cps
- Serial baud rates to 38.4 Kbps
- On-board RISC processors
- Hardware and software flow control
- Full-modem support on serial lines
- GUI setup under Solaris ADMINTOOL
- Compatible with any SBus-based system
- Supports SunOS and Solaris 2.x
- Single command install
- 1 Year warranty with extended maintenance options

Configurations

10S	Single Centronics parallel port
20S	Dual Centronics parallel ports
210S	Single Centronics parallel port/dual RS-232 serial ports
420S	Dual Centronics parallel ports/four RS-232 serial ports
