

## **SBox<sup>®</sup> SBus Expansion Chassis**

The Aurora SBox economically adds 4 or 8 new SBus slots, and space for two half-height SCSI devices, to any SPARC system. Cards installed in the SBox operate as though system resident, adding the expandability of up to four new workstations from a single system at a fraction of the cost of one workstation.

### **Features**

- Adds 4 or 8 SBus slots from one host slot
- Adds 2 or 4 half-height SCSI device slots
- Boot-independent start-up and shut-down
- 120/240 V auto-sensing power supply
- SPARCstation 10-style pizza box
- Supports multiple dual-width SBus cards
- Operational to 100' from host
- Compatible with any SBus-based system
- Supports SunOS and Solaris 2.x
- Compatible with all slave SBus cards
