Synchronous Protocol Developer's Kit

The Aurora Synchronous Developer's Kit (SDK) provides the complete tool set for
creating link layer WAN access for Aurora's high-performance SPARC system comm-
unications servers. The kit includes an API, synchronous device driver source code,
comprehensive documentation, and optional DLPI interface to network layer protocols
to allow custom and off-the-shelf synchronous networking applications to take advantage
of the functionality of Aurora Multi-Protocol WAN Controllers for remote LAN sharing.

Features
• SunOS, Solaris 2.x, HP-UX, and Solaris x86 compatible
• Comprehensive documentation
• Usable sample code
• Complete physical driver source code
• Link-layer API included
• DLPI interface optional
