

Evergreen Systems International

DIAMOND and OMEGA Trackballs

Product Information

1. DIAMOND XX Series trackballs - Industrial / Military quality (TEMPEST versions available), 2 inch diameter ball, high resolution, multiple output formats.
2. DIAMOND XL Series trackballs - Industrial / Military quality, 2 inch diameter ball, high resolution, multiple output formats.

The two DIAMOND models, XX and XL, provide alternative approaches to human fit / form and ergonomic considerations.

3. OMEGA Series trackballs - rugged, 1.5 inch diameter ball, very compact (about the size of a mouse), high resolution, multiple output formats. This precision input device is specifically engineered for applications where space is a premium.

All products feature precision ball bearings, DIAMOND hard shafts, high resolution output (400 counts / revolution of the ball) and Dynamic Resolution, which multiplies the output (up to 8 times) when the ball is rotated faster.

The latest addition to our product line, the DIAMOND XL, was developed in conjunction with the U.S. Navy, Hughes Data Systems and Hewlett Packard to fill a demanding application. The unit is considered an advanced ergonomic solution to operator fatigue and a deterrent to the development of Carpel Tunnel Syndrome.

Evergreen Systems is one of the largest manufacturers of trackballs, addressing industrial / military as well as home, office and commercial requirements for survivable, ergonomic pointing devices.
