

**SAS/PH-Clinical**<sup>®</sup> software provides physicians, clinicians, biostatisticians, and clinical data processing professionals with an easy-to-use application for quick access, review, and analysis of clinical trials data. The result is improved speed and communication among clinical teams during the data review process. Users can quickly create patient groups for special populations and query to find out how many patients meet criteria. In addition, they can browse patient records or listings; generate tables and reports; analyze safety and efficiency data by producing descriptive statistics, percent change reports, t-tests, etc.; graph data with scatter plots, bar charts, regression plots, and more; print and save output or graphs; create and save notes about observations of clinical data; manage libraries of programs, patient groups, graphs, output and notes.
