

These versions of **CONFIG.SYS**, **NET.CFG**, **PROTOCOL.INI**, **STARTPCS.CMD**, **CONFIG.PCS**, and the **DOS Settings for the DOS box** provide access to a Novell network and an AS/400 through 5250 emulation under Communications Manager as well as PC Support simultaneously. They work in the following environment:

Workstation: IBM PS/2 Model 77 (486DX/2) with 16 Mb RAM, 200 Mb hard drive and IBM 16/4 Token Ring Adapter. Software was added in the following order: OS/2 2.0 was preloaded on the system and Extended Services Ver 1.0 was added by the user. The Netware Requester for OS/2 (from Novell) was installed and the corrective diskette NSD202 from Netwire was added.

Network: IBM Token Ring, Compaq Systempro server running Netware Ver 3.11 with 32 Mb RAM, 5.2 Gb expansion chassis.

AS/400: OS/400 Ver 2.0 Release 2.0 and PC Support for OS/2.

I would like to acknowledge the help of several users in the OS/2 and Novell forums as well as the help of IBM Technical Support in Toronto, Canada.

STARTPCS.CMD

NOTE: This version of STARTPCS.CMD allows use of the AS/400 PC Support Organizer to provide file transfer functions between the AS/400 and the PC workstation on the network.

```

CONFIG.PCS

NOTE: Make sure that the entries in bold print are made. In PC Support under DOS, 5250LU is replaced by the actual ID of the PC workstation on the network and 5250PLU is replaced by the serial number of the AS/400 system.

```
RTYP CMGR
LCLN 5250LU
MCAO 256,,2
MDEF 5250PLU,1
MMRI 60
PTIM 30
SFLR 1,I,QIWSOS2,5250PLU
RTDN 5250PLU
RMTN 5250PLU
UPDT I:\QIWSOS2,C:\PCSOS2,S,,,PC Support/400
```

DOS BOX SETTINGS

NetWare_Resources Private, VIPX_Enabled Yes, DOS_LASTDRIVE E NETX Loaded, Logged in.

DOS_LASTDRIVE is set to E to provide a familiar F: drive for the user's home directory under Netware.

This setup gives full NCP support and runs all our standard server based DOS programs e.g. WordPerfect 5.1, Lotus 1-2-3, Harvard Graphics, etc. All search mappings are retained under DOS.

Your batch file to login to the network should include the line

SET COMSPEC=C:\OS2\MDOS\COMMAND.COM

so that when exiting from DOS programs, the correct version of COMMAND.COM is reloaded. Also modify your search drives to include **C:\OS2\MDOS** or external programs like XCOPY will not run.
