

Along with the Windows binary DEM files, I have included the same DEM files in a VistaPro DEM file format for more cross platform compatability. The binary files have a ".bin" filename extension while the VistaPro DEM files have a ".dem" filename extension. Ocean files were not included due to there not being any surface information. All binary files are licensed from Rocky Mountain Digital Peeks. All files on this CD-ROM are Copyright 1998 by Graphic Detail Inc. There is a thumbnail preview of each DEM file in the Jpeg file format in each DEM directory.

If you are looking to purchase the VistaPro 4.0 software, try www.ebay.com. Either search thru the Ebay Store by "AA Moss Sales" or do a search by seller name "softdeal@pacbell.net" Email to this same email address will work. You can also perform an Ebay search for "VistaPro". You can purchase this software for Windows for under \$20 from this Ebay seller (at the time of this writing).

These DEM (digital elevation maps) are royalty free only to the purchaser of this CD-ROM to use in your own productions. These files can not be re-sold or distributed in any manner (BBS's, websites, Internet file sharing sites, CD-ROMs, email, CD-R, etc.) without written permission of Graphic Detail Inc.

Thank You,

Graphic Detail Inc.
