docs/english/WRITE

1.1 docs/english/WRITE.guide

```
          Documentation for WRITE 5.0ß (BETA/INTERNAL) (23 November 1996)
************************************************************
```

1.2 WRITE.guide/Systemdependencies

Dependencies for hard- and software
****

The following things are needed for using WRITE:

    You need AmigaOS 2.04 or higher. Some things will only work with
    AmigaOS 3.0 or higher. Recomended is AmigaOS 3.0/3.1.

    You need a bunch of memory. WRITE will run on a bare Amiga 1200 mit
    2MByte, but it is recomended to have more memory.

    WRITE of course will run on a bare 68000, but here, too, having more
    is recomended. A 68020 should be enough, syntaxcoloring may need
    even more.

    WRITE needs a stack of 30000 Bytes. If you make use of recursive
    functioncalls you should increase the stack.

    Please read the documentation carefully, before using WRITE.

1.3 WRITE.guide/Copyright

Copyright
****

                  Condition for using WRITE:

  * Me, the author of WRITE, is in no way responsible for any damage
    generated directly or indirectly by WRITE.

  * It is forbidden to disassemble, decode or decompile ... WRITE or any
    other part of the packet.

  * The unallowed use (stealing) of part of this packets is forbidden,
    too.

  * The user accepts this and all other condition with the use of WRITE.

* Everybody who acts not in spite of these condition should be aware
  that he is doing an criminal action and that I'll use the ways of
  the law to hinder him. Exspecially the selling of WRITE as a
  comercial product falls under this point.

            This version of WRITE is freeware

       It can be used under the following conditions:

* The packet must only be spread in whole.

* Changes on any parts of this packet are forbitten except:

    1. Translations. You can add translations of the documentation or
       parts of it to the packet. Be carefull not to change the sense
       of the texts. Before starting to translate parts of the
       documentation please call me. Trasnlation must be handed to me
       and you must allow me to add this translations to future
       versions of WRITE.

    2. Changing of icons, tooltypes and icon-positions.

* The price for a disk containing a demo of WRITE in any form must not
  be above 5DM or a equal value in any currency.

  The price for a CDRom or any mass-store-media must not be more than
  30DM or a equal value in any currency.

* Fred Fish is allowed to add the demoversion to his collection.

* It is also allowed to upload the demoversionto Aminet and to put in
  on AminetCDs.

* Aslo a publication on the Meeting Pearls CDs is allowed but the
  complete archive should be added if possible.

                    Costless regestry

Because I want to know, who uses WRITE, there is the possibility to
register yourself for WRITE. This registry is costless, you don't need to
pay for it.

Registered users get a keyfile which includes its name. You can only
register using my EMail-address. Send me your name and your address to me
EMail-Address and you will get the key uuencoded replied to your
EMail-address.

                      presents :-)

WRITE is freeware but presents are allowed. Everybody who things that he
has a little bit money for me can send me every amount of money he likes.
If you think sending money is dump, you can send me other things. I like
most: Computerhard- and software, SF and fantasybooks (can be english)
and music-cds (please ask me about the things I like!). If that is more
than you like simply send me a letter or a postcard.

    About programming, moral, time, money and the future ...

I want to explicitly say at this point that I'am not forced to work on
WRITE in the future. I can change, kill of WRITE or add new stuff at every
time I like. Compatibilty to older version can thus not be garanted.

This does not mean, that I'am not willing to add the stuff the user wants.
Some parts of WRITE wouldn't be included without the whishes of my
betatesters. But this means that I to make WRITE better will drop bad
concepts and exchange them with better ones.

I also want to say that programming is only one of my hobbies amd I'am
currently doing my studies which cost a large amount of time.

1.9 WRITE.guide/Thanks

```
Thanks
******
```

                    The author wants to thank ...

Chris Gray,
     who wrote that exellent draco-compiler, WRITE was written with upto
     version 2.50.

A+L,
     for the Oberon-Compiler, which made writing WRITE so much simpler.

Lars Hanke,
     for hints, critcism and beta-testing, his ideas, feature-whishes and
     much other things. Without him, WRITE would not be that powerfull.

hartmut Goebel,
     for parts of his OberonBOOPSI-package, used for the hui.library, his
     informations about the thexsystem of the OberonSystem und for a
     bunch of sources, ideas, improvement-hints, beta-testing and much
     more. Thank you.

Thomas Wagner,
     for his beta-testing and his volumious and detailed bug-reports.

Marc René Preß,
     for the logo and that many hours he had to listen to me.

Martin Loos, Olaf Peters and Mr. X,
     who helped me to spread WRITE.

Thomas Lottermoser,
     for tips, criticism and literature.

Thomas Stuff,
     for tips criticism and beta-testing.

Andreas Schulz,

for the draco-club germany.

Moni,
    for listening, testing and her interest, when I talked about things,
    she wasn't really interrested in, and her beta-testing. She wrote
    her "erste Staatsarbeit" using WRITE and TeX.

Jörg Janshen-Jaeger,
    for beta-testing and his box "Fort Hope" making it possible for me
    to do updates on Aminet.
