## 1.2 introduction

### Introduction

TotalCalc is a calculator with the following main features:

- Possibility to convert among floating point, decimal, hexadecimal and binary systems.
- Up to 13 digits in floating point and decimal modes.
- Long word numbers (+/- 2147483648) in hexadecimal and binary modes.
- Arithmetical operations.
- Square root, power, "e" (2.712828...) to power, natural logarithm (base "e"), logarithm (base 10).
- Trigonometric functions (in radians).
- Logical operations (hexadecimal and binary modes only).
- Up to 20 nested parentheses.
- Memory functions.
- Possibility to use any font of your choice.

## 1.3 system requirements

### System requirements

TotalCalc requires Kickstart 2.04+ and the following libraries in the LIBS: directory.

- diskfont.library
- mathieeedoubbas.library
- mathieeedoubtrans.library

## 1.4 installation

### Installation

Just drag the TotalCalc icon anywhere you want.

## 1.5 usage

### Usage

You can start TotalCalc from Workbench by double-clicking its icon or from a Shell window by entering its name. The CLI template is the following:

MODE/K, FN=FONTNAME/K, FS=fontsize/K/N, X=xpos/K/N, Y=ypos/K/N

### See

### ToolTypes and CLI arguments

.

The program can run on any public or custom screen, so you may use tools such as the FKey commodity to call it at any time.

Use the program as a normal calculator. The following are brief descriptions of the key functions (between square parentheses you will find the respective keyboard shortcuts) :

"0\$\div\$9/A\$\div\$F" – Numerical keys [0\$\div\$9/A\$\div\$F].  
" ." – Decimal point [ . ].  
" < " – Back space [BACKSPACE].  
" + " – Addition [ + ].  
" - " – Subtraction [ - ].  
" x " – Multiplication [ \* ].  
" \$\div\$ " – Division [ / ].  
" +/- " – Negation [ ' ].  
" = " – Perform the operation [=|Enter].  
" OR " – Logical OR.  
" XOR " – Logical XOR.  
" NOT " – Logical NOT.  
" AND " – Logical AND.  
" ( " – Open parenthesis. [ () ]  
" ) " – Closed parenthesis. [ () ].  
" CE " – Clear the last entry.  
" CA " – Clear all [DEL].  
" MR " – Memory recall (to clear the memory content, click on "MR" first, then on "M-").  
" M+ " – Memory addition.  
" M- " – Memory subtraction.  
" FLT " – Floating point mode [TAB].  
" DEC " – Decimal mode.  
" HEX " – Hexadecimal mode.  
" BIN " – Binary mode.  
" LSW " – Display the least significant word in binary mode.

---

"MSW" - Display the most significant word in binary mode.

Click on "EXT" to open/close an extra panel containing other keys. They are:

"SIN" - Sine.

"COS" - Cosine.

"TAN" - Tangent.

"ASIN" - Arcsine.

"ACOS" - Arccosine.

"ATAN" - Arctangent.

"HSIN" - Hyperbolic sine.

"HCOS" - Hyperbolic cosine.

"HTAN" - Hyperbolic tangent.

"EXP" - "e" (2.712828...) to power.

"LN" - Natural logarithm (base "e").

"LOG" - Logarithm (base 10).

"SQRT" - Square root.

"POW" - Power.

"Pi" - Pi (3.14159265359).

TotalCalc does not care about the operators priority but it performs the operations sequentially. So the calculus "2+3\*4" will be processed as "(2+3)\*4=20" and not "2+(3\*4)=14". Use the parentheses to obviate this.

You can press "RCOMMAND c" at any time to copy the displayed number into the clipboard.

## 1.6 tooltypes and cli arguments

ToolTypes and CLI arguments

TotalCalc recognizes the following ToolTypes and CLI arguments:

MODE=FLT|DEC|HEX|BIN

Indicates the initial numeration system.

FONTNAME=<font>

Specifies the program font name.

FONTSIZE=<n>

Specifies the program font size.

XPOS=<n>

Specifies the horizontal position of the program window.

YPOS=<n>

Specifies the vertical position of the program window.

## 1.7 menus

Menus

TotalCalc provides the following menus:

Project/About...

Gives you some information about the program.

Project/Quit

Quits the program.

## 1.8 guarantee

Guarantee

The program has been tested several times, but its reliability is not guaranteed at 100%. I (

the author

) do not consider myself responsible

for loss or damage of data as consequence of the use of the program. Use TotalCalc at your own risk.

## 1.9 copyright

Copyright

The program is CARDWARE, therefore it is freely distributable on condition that it is always accompanied by all the files in this archive. The whole archive must not be modified in any way. If you think TotalCalc is useful, let me know by sending

me

a postcard (preferred) or an e-mail message.

---

## 1.10 acknowledgements

### Acknowledgements

I must thank the following people for suggestions and ideas:

- Georges Goncalves
- Arno Richter

as well as all the Amiga users and programmers for continuing to believe in this machine.

## 1.11 author
