                Disclaimer and Copyrights
```

1.2 Introduction to RebootWB

```
What I get annoyed about in WB is that it comes with the tools menu and the  ←
   one tool ResetWB.
I know some programs support this but it's still not used as much as it should ←
   .  It should
have a tool that reboots Workbench as well as reseting it so I have written  ←
   this small commodity
to do this.  I puts RebootWB in the tools menu and uses lets you select if you  ←
   want to reboot
or not with a requester.  If you select Yes it performs a cold reboot. Easy as  ←
   that!
```

1.3 The features of RebootWB

```
* A Information Requester to allow you to select
* supports MagicWB and NewIcons
* Use exchange to remove program and activate it.
```

1.4 How to Install RebootWB

```
Easy.  Copy RebootWB to sys:WBStartup.
```

1.5 How use RebootWB

```
The executable will be activated upon startup and sits in your tools menu.   ←
   Simply select that
and select Yes or No.  If you select No the Requester will close.  Yes reboots ←
   WB.
```

1.6 Known Errors and Bugs

```
(Sorry couldn't find any really.  If you find any let us know)
```

1.7 The future of RebootWB and White Star Software

```
* Add simple GUI to allow you to close program         (Next Realease)
* Add Hot Keys              (Next Realease)

Other programs are in development by White Star Software.  This is a list of  ←
   the others.

* Lockout v0.01                                         (01,09,98)
   A logon program including prefs and system master program.
```

* A Whole Lot More v0.01   (01,09,98)
  A Text Viewer that uses a listview and Reqtools to display text.

* AmiZip v0.01   (??,??,98)
  A Gui for zip on the Amiga. Works like Winzip.

* Arcavier v0.01   (??,??,98)
  A Gui for Lha and Lzx. Works like Winzip.

1.8 The Disclaimer

RebootWB is FreeWare. This means that if can be passed on to anyone if all ←
    the files
are kept the same. You are not allowed to make a profit of it.

If you computer software and hardware have problems with this program and ←
    then doesn't work
anymore then don't blame me. I wont take any responsability for any ←
    problems that have
appeared since you have started using this program.
