or by EMail, naasc@cnaas.adsp.sub.org

or you can call my BBS, Falling, at #69 256117
```

1.3   What is Startup Preferences?

```
Startup Preferences is a little program for you to put in your Prefs drawer.
It will disable / enable WBStartup, User-Startup, Preferences and the
68040.library.
This can come in handy when you're testing programmes in different
enviroments, would like to see how it looks and functions without all your
handy little hacks in the background, etc.

Here's a little description of what the above do:

WBStartup      - this drawer contains all those programmes you run when you
                 open the Workbench.

User-Startup  - this is a script file with which you can configure stuff
                 and / or execute programmes.

Preferences   - the directory Prefs/Env-Archive contains all your programme
                 configurations.

68040.library - this library is used to initialize the FPU functions of the
                 68040 processor etc.
```

1.4   How to install Startup Preferences

```
Installation is easy. Simply drop the Startup Preferences icon in the Prefs
directory, and double click to run.
```

1.5   Startup Preferences documentation

```
When you double click the Startup Preferences icon, you will be presented
with a small window containing two buttons and four checkbox gadgets.
The checkbox gadgets will be checked, un-checked or disabled.
If a gadget is checked, it means that the option is enabled, and will be
executed the next time you reboot.
If a gadget is not checked, the option is disabled, and will not be run.
If a gadget is disabled, however, the option in question doesn't excist on
your system, and has not been disabled using Startup Preferences.

To enable / disable the various options, simply check / un-check the
```

```
checkboxes, and press OK.

To cancel the action, press Cancel.

To disable an option, Startup Preferences simply renames it to Noxxxx.
Startup Preferences does NOT fragment your hard drive. It is completely safe
to use, but the author takes no responsibility for anything caused as a
result of using Startup Preferences.
```

1.6 credits

```
Startup Preferences was written by Christopher Naas, SSD in SAS/C 6.3.

Special thanks to the following:

Harald Kuhr / SSD – for the original idea, and the translation into
                    Norwegian
Arthur Hagen      – for his help
Petter Nilsen     – for his help
Magne Østlyngen   – for his help
Øyvind Sægrov / SSD (+ all the rest of him) – for his suggestion
```

1.7 Additional information

```
Startup Preferences was written on an Amiga 4000/040 with 10MB RAM
using SAS/C 6.3. Startup Preferences has been tested on the above
machine, without producing any errors. Startup Preferences did not
produce any Enforcer hits.
Startup Prefernces is believed to function on any Amiga running
Kickstart 2.0 or higher. This has not been tested. Please report any
and all problems to the author.
```
