Drag and drop either the Direction or North shape from the Directional Map Shapes stencil to make your maps easier to read.

The Freeform Tool in the Standard toolbar helps make graphically rich directional maps. With this tool, you can draw practically any shape you want. Just connect the endpoints and you have a shape that will behave just as a SmartShape. Fill it with color, rotate it, add text to it, or even move it to a different location.

Drag and drop cities, bridges, and highways to increase the realism of your drawing.
