

Flying Nightmares Read-Me

This demo only runs for five minutes before it quits, but I have found that certain areas also leave you stranded. None of the documentation states this but the 'esc' or the '' will both get you out of this situation. ⌘-Q does nothing and opt-shift-esc causes the machine to crash so DO NOT use either of these. This is the most important thing that I get across to people before I put this file on the archive since it is our policy never to place a file that knowingly crashes a machine onto our site.
