## Hide Me:- Overview

Hide Me is easy to use and is ideal for busy executives wanting to protect sensitive or personal information.

Hide me:-

Allows you to encrypt your private files and directories.

Every time you encrypt your files, the passwords are optionally written to a floppy disc.(Your keydisc.)

This floppy disc has one password which allows only you to read back all the passwords you have allocated for each file you hide.

To restore your hidden files, either enter your password directly into your PC or use the key floppy disc facility and click on the password(s) you have saved.

There are no options, except to choose your passwords.

All you have to do is tell Hide Me the drive on which your files are to be restored, and Hide Me will restore all your private files in their correct directories.

[How to use Hide Me](#)  
[Contents](#)

# How To Use Hide Me

## Hiding Files

You must choose the files you want to Hide

You can do this by pressing:- Choose Individual files to hide

These will be put, one by one, into the Hide box.

For choosing many files, then press:- Search Disc for Files to Hide

You should then choose the directory you want to search.

You can narrow the search by using the option button on the left of the form.

Press Search and a list of files will be put into a box.

Select the ones you want to hide by clicking on them. When you are satisfied with your list. Press OK.

If you want to select all the files, then press Select All

If you want to remove a file in the main Hide box, then double click on the file name in the box.

When you are satisfied with your list, press Hide Files Now.

We recommend you now add descriptive comments because these will be available for people to see before they restore it anytime in the future.

You then add your password. The password can be up to 64 characters in length and is case sensitive.

If you keep a floppy disc in your A: drive whilst using Hide Me, all your passwords will be stored inside a personally password protected file.

Hide Me then deletes the files and puts them into one Hide Me file, complete with the directory names, and no one can unlock it unless they have your password.

## Restoring Files

### Method One

You can restore your hidden files by pressing:- Restore hidden files.

You will then be prompted for a password, which must match exactly the password which was given when the files were hidden. You must also enter each password letter in uppercase or lowercase letters depending how you entered it originally.

If the password is correct, the files will be restored to your disc.

### Method two

You can also restore your files by using your keydisc.

Put your keydisc in your a:drive and click on Read Password from Keydisc.

You will then see your encrypted file name, the password and the day and time of encryption.

To restore the encrypted file, double click on the password.

## **Digital Cameras:- Picture and Document Mailer**

The Olympic Picture and Document Mailer is a program for people who want to send Pictures, Documents and Sounds to other people. It runs on any P.C. from 486 upwards and runs under Windows 3.1 or Win 95.

It is a program essential for users of Digital Cameras, Scanners, Multi-Media designers and anyone who simply has to send computer files to anyone else.

The programme includes the Olympic Hide Me facility which zips up a complete slide show of pictures/text and sounds.

The slide show is zipped into a Pic.zip file and then immediately copied to a floppy disc for mailing through the post or sent immediately via your e-mail around the world.

At the receiving end, the pictures are automatically unzipped and put into a viewer for slide show presentation.

[More On Picture and Document Mailer](#)

## More On Picture and Document Mailer

Whilst the program is useful for all people who use computers, the design of the program makes it particularly helpful for people dealing with pictures.

You select 10 pictures which appear as 10 slides on one page.  
You attach or type in text information about the pictures. (Optional)  
You attach a sound for each of the pictures. (Optional)  
You attach any other files you want to send.

All these files are then wrapped up in one Pic.zip file, (called an envelope, ) which is either copied to a floppy disc or fired into your e-mail directory for immediate transmission.

You have 10 envelopes in each programme (100 pictures) and can see what is inside each envelope before opening and viewing it.

All incoming mail is archived for Future and Total Recall.

At the distant end, the incoming Pic.zip files, (envelopes) are automatically unzipped, (opened) and presented to the viewer in a CinemaScope format.

They can then scroll through the viewer to look at each picture and text information you have sent them.

If any of the pictures are large, then they can be expanded to full size through a large viewing facility.

[More information](#)

## **More on Zip-A-Pic:-**

### **Picture and Document Viewer**

If the pictures are required for exhibition purposes, an automatic slide show can be activated.

Other personal utilities on the program include a facility to play compact discs.

A customization facility is available whereby Companies can enter their contact details before sending the programme to others.

These details then form part of the screen headings and the contact details must be viewed before the program ends.

This makes the program a good advertising medium.

The viewer supports all type of picture files, from BMP, Tiff, JPG through to Dib, PNG etc..

To order the Picture and Document Viewer please click on order

## Important Note to Protect your Privacy

When you create a hide me file, you delete the original files and encrypt them all inside a password protected file.

However, if you have the Windows Undelete or MS-Dos Undelete switched on, then people will be able to use this utility to restore your deleted files.

If it is important that no-one can use the Undelete facility to restore your deleted files, make sure you switch off this facility before using Hide Me.
