

## Registration

Please don't skip this section. Even if you don't plan on registering initially, some of what I have to say might entice you to register, especially if you are interested in obtaining the source code to this program.

### Quick Price List

standard registration:	\$20.00
standard registration on CompuServe:	22.50
standard upgrade from CFG 2.2:	10.00
source code registration:	45.00
source code registration on CompuServe:	45.00 (2x standard)
outside the continental US add:	3.00

### Standard Registration

This program is Shareware. I am asking for a registration fee of \$20 for the Standard Version of CFG. If you pay this fee, you will receive the registered version of the program for all Macs and a version accelerated for PowerMacs. These programs will not prompt for registration. You will also receive the skeleton code for creating your own CFG palettes. All you need to do is put in the code to create the desired colors. The source is in THINK C 6.0 format.

### Source Code

Ok, now, here's the real value. If you send \$45 for registration, I will send you the Master Version of CFG. Learn to program the Power Macs! This includes the FULL SOURCE CODE in Metrowerks CodeWarrior C format. Only slight modifications are required for it to compile on THINK C 6.0 or later. The code includes portions of Frontier SDK 3.0 which are used to build CFG (source has been modified to work with the Power Mac). I highly suggest that you obtain the entire SDK as it will prove to be a valuable addition to your development library. This will allow you to modify the procedures for your own program (however, you are not permitted to release or sell modified versions of this program or release or sell code which is based entirely or in part on this program's source code). You also will receive all the benefits of the Standard Version described above plus a free upgrade when the next version becomes available (source code not included for the free upgrade).

### CompuServe Registration

For users of CompuServe, you can register this software online! Simply type "GO SWREG" and use the registration ID 2811. Please note that the cost of registration on CompuServe is \$22.50 for two reasons: CompuServe takes a 15% cut from the Shareware fee and registering twice pays the price of the source code registration (please E-mail me if you do this so that I send you the one copy of the source code and not two standard copies).

## Upgrades

Registered users of version 2.2x of CFG may receive an upgrade to the current version for \$10. If you registered within three months of the release date (August 15, 1995), you will automatically receive a free upgrade. If you are a registered owner of the source code, contact me about source code upgrades.

Outside Continental U.S.

Please add \$3 for shipping and handling.

## General

Please, when you register, try to send either a check or money order. I will accept cash, but it could become a real hassle, especially if it gets lost in the mail. Mention that you are registering for Color Fractal Generator 2.3 (I have a couple other Shareware products). Finally, if you have an E-mail address, provide that as well.

Send your Shareware fees to:
