

ShockBox(SB) is an Internet and desktop "audio" browser. SB allows the playback of Shockwave and MP3 "streaming" audio from custom SB Servers and from FTP sites located on the Internet. All you need to build your own free SB Server is a website. SB's desktop area allows the playback of SWA, MP3, MP2, MPG, MOV, AIF, WAV, AU, AVI, MIDI and DV files off of your hard drive or local network. Build, shuffle, save, and load custom playlists.

New in Version 1.4:

- * Download updates directly through ShockBox
- * ShockBox Server welcome screen with disclaimer option
- * Preference file created
- * Click on movie thumbnail for larger display
- * Playlist and bookmark files encrypted for security
- * Password protection in FTP area
- * Direct access to readme files and website from pulldown menu
- * Enhanced dialogs and alerts
- * Locate audio files by scanning selected folder
- * Hyperlink support in news area
- * Bookmark menus are now more reliable
- * Accurate scrolling routines
- * Creation of icons for new filetypes (MAC only)
- * Endless bug fixes

System Requirements:

- * PowerPC Macintosh (100mhz) with 6MB memory
- * or Windows 95/98/NT (100mhz) with 6MB memory
- * 56k modem connection or higher
- * Quicktime 4 required
