used

ShrinkWrap is a handy utility
which allows you to convert the entire contents of a disk into a
transferable file which, in turn, can be easily transformed back
an exact disk image of the original disk. It supports commonly
file formats, 40-bit encryption, and has Stuffit compression
capabilities.

patch

Although Apple has updated the
user interface in Mac OS 8, many third-party applications do not
yet take full advantage of these changes. Use Aaron Light to

your

progress

these applications so that they use the new appearance, giving Macintosh a more uniform interface. In particular, Aaron Light patches floating windows, dialog box backgrounds, and bars (including the start-up progress bar).

back-

expandable

Tired of the appearance of your boring old desktop? Jazz it up with this control panel and get 3D folders, retractable windows, and customizable Finder window grounds. Plug-ins are being added all the time to give this program even more power.

PDF

many

Window Monkey adds background pictures or textures to any window in the Finder. You can color-code your windows to see at a glance what they contain, or use wild patterns just for fun. It's useful too: use the Window Monkey menu to go to any window in any application, even if it's buried beneath many other windows.

compressing
storage

This Macintosh program adeptly zips and unzips files. It is very easy to use and is ideal for compressing several files into one for easy transmission over data lines or on a disk. ZipIt files can be decompressed on almost any

platform

without loss of information.
