Octave Quick Reference Octave Version 1.1.1

Starting Octave

octave	start interactive Octave session
octave $file$	run Octave on commands in file
octavehelp	describe command line options

Stopping Octave

quit of exit	exit Octave
INTERRUPT	$(e.g. \ C-c)$ terminate current command
	and return to top-level prompt

Getting Help

help	list all commands and built-in variables
help command	briefly describe command
help -i	use Info to browse Octave manual
help -i command	search for command in Octave manual

Motion in Info

SPC or C-v	scroll forward one screenful
DEL or M-v	scroll backward one screenful
C-1	redraw the display

Node Selection in Info

Node Selection	11 111 11110
n	select the next node
p	select the previous node
u	select the 'up' node
t	select the 'top' node
d	select the directory node
<	select the first node in the current file
>	select the last node in the current file
g	reads the name of a node and selects it
C-x k	kills the current node

Searching in Info

C-s	search forward incrementally
C-r	search backward incrementally
i	search index & go to corresponding node
,	go to next match from last 'i' command

search for a string

Command-Line Cursor Motion

0-1	move forward one character
C-a	move the the start of the line
С-е	move to the end of the line
M-f	move forward a word
M-b	move backward a word
C-1	clear screen, reprinting current line at top

move back one character

Inserting or Changing Text

M-TAB	insert a tab character
DEL	delete character to the left of the cursor
C-d	delete character under the cursor
C-v	add the next character verbatim
C-t	transpose characters at the point
M-t	transpose words at the point

surround	option	al arg	umen	ts		show	one	or	more	ar	gume	nt
${\bf Copyright}$	1996,	1997	J oh n	W.	Eato	n	Pern	niss	ions	on	back	

Killing and Yanking

C-k	kill to the end of the line
С-у	yank the most recently killed text
M-d	kill to the end of the current word
M-DEL	kill the word behind the cursor
M-y	rotate the kill ring and yank the new top

Command Completion and History

TAB	complete a command or variable name
M-?	list possible completions
RET	enter the current line
C-p	move 'up' through the history list
C-n	move 'down' through the history list
M-<	move to the first line in the history
M->	move to the last line in the history
C-r	search backward in the history list
C-s	search forward in the history list
history $\left[-\mathrm{q} \right] \left[N \right]$	list N previous history lines, omitting history numbers if $-q$
history -w $\left[file ight]$	write history to file (~/.octave_hist if no file argument)
history -r $[file]$	<pre>read history from file (~/.octave_hist if no file argument)</pre>
edit_history lines	edit and then run previous commands from the history list
run_history lines	run previous commands from the history list
ig[begig]ig[endig]	Specify the first and last history commands to edit or run.
If her is greater t	than and reverse the list of commands

If beg is greater than end, reverse the list of commands before editing. If end is omitted, select commands from beg to the end of the history list. If both arguments are omitted, edit the previous item in the history list.

Shell Commands

$\begin{array}{c} \operatorname{cd} \ dir \\ \operatorname{pwd} \end{array}$	change working directory to dir print working directory
ls [options]	print directory listing
getenv (string)	return value of named environment variable
${ t system~(cmd)}$	execute arbitrary shell command string

Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, provided that all the dimensions agree.

[x, y]	y,]	enter a	row vector
[x; y]	y;]	$_{ m enter}$ a	${\tt column\ vector}$
[w, :	x; y, z	enter a	2 X 2 matrix

Ranges

	_		
base	:	limit	
base	:	incr:	limi

Specify a range of values beginning with base with no elements greater than limit. If it is omitted, the default value of incr is 1. Negative increments are permitted.

Strings and Common Escape Sequences

A string constant consists of a sequence of characters enclosed in either double-quote or single-quote marks.

//	a literal backslash
\"	a literal double-quote character
\',	a literal single-quote character
\n	newline, ASCII code 10
\t	horizontal tab, ASCII code 9

Index Expressions

var (idx) var ($idx1$, $idx2$)	select elements of a vector select elements of a matrix
scalar	select row (column) corresponding to $scalar$
vector	select rows (columns) corresponding to the elements of $vector$
rang~e	select rows (columns) corresponding to the elements of $range$
:	select all rows (columns)

Global Variables

global var1 Declare variables global.
Global variables may be accessed inside the body of a
function without having to be passed in the function
parameter list provided they are also declared global within
the function.

Selected Built-in Variables

Selected Dulit-	-III variabies
EDITOR	editor to use with edit_history
Inf, NaN	IEEE infinity, NaN
LOADPATH	path to search for function files
PAGER	program to use to paginate output
ans	last result not explicitly assigned
eps	machine precision
рi	π
realmax	maximum representable value
realmin	minimum representable value

automatic_replot
do_fortran_indexing
implicit_str_to_num_ok
output_max_field_width
output_precision
page_screen_output
prefer_column_vectors
resize_on_range_error
save_precision
silent_functions
warn_divide_by_zero

commas_in_literal_matrix

automatically redraw plots
Fortran-style indexing of matrices
allow strings to become numbers
maximum numeric field width
min significant figures displayed
control whether output is paged
create column vectors by default
automatic resizing of matrices
digits stored by save command
suppress output from functions
suppress divide by zero errors

```
control handling of spaces in matrices

ignore_function_time_stamp

ignore changes in function files during session

ok_to_lose_imaginary_part

allow complex to real conversion

prefer_zero_one_indexing
```

if ambiguous, prefer 0-1 style indexing

Arithmetic and Increment Operators

x + y	addition
x - y	subtraction
x * y	matrix multiplication
x .* y	element by element multiplication
x / y	right division, conceptually equivalent to (inverse (y') * x')'
x ./ y	element by element right division
x \ y	left division, conceptually equivalent to inverse (x) * y
$x \cdot y$	element by element left division
$x \hat{y}$	power operator
x .^ y	element by element power operator
- x	negation
+ x	unary plus (a no-op)
x,	complex conjugate transpose
x .,	transpose
++ x (x)	increment (decrement) x, return new value
x ++ (x)	increment (decrement) x, return old value

Assignment Expressions

var = expr	assign	${\tt expression}$	$_{\rm to}$	variable	
var (idx) = expr	assign	expression	$_{\mathrm{to}}$	indexed	variable

Comparison and Boolean Operators

These operators work on an element-by-element basis. Both arguments are always evaluated.

Short-circuit Boolean Operators

Operators evaluate left-to-right, expecting scalar operands. Operands are only evaluated if necessary, stopping once overall truth value can be determined. Operands are converted to scalars by applying the all function.

```
x &  x &  y true if both x and y are true x \mid | y true if at least one of x or y is true
```

Operator Precedence

Here is a table of the operators in Octave, in order of increasing precedence.

```
; , statement separators
= assignment, groups left to right
| && logical "or" and "and"
| & element-wise "or" and "and"

< <= == >= > != relational operators
: colon
+ - addition and subtraction
* / \ .* ./ .\ multiplication and division
' .' transpose
+ - ++ -- ! unary minus, increment, logical "not"
exponentiation
```

Statements

for identifier = expr stmt-list endfor
 Execute stmt-list once for each column of expr. The
 variable identifier is set to the value of the current column
 during each iteration.

while (condition) stmt-list endwhile

Execute stmt-list while condition is true.

break exit innermost loop
continue go to beginning of innermost loop
return return to calling function

if (condition) if-body [else else-body] endif
 Execute if-body if condition is true, otherwise execute elsebody.

if (condition) if-body [elseif (condition) elseif-body] endif
Execute if-body if condition is true, otherwise execute the
elseif-body corresponding to the first elseif condition that
is true, otherwise execute else-body.

Any number of elseif clauses may appear in an if

unwind_protect body unwind_protect_cleanup cleanup end Execute body. Execute cleanup no matter how control exits body.

Defining Functions

```
\begin{array}{ll} {\tt function} \ \left[ {\tt ret-list} \right] \ function{-}name \ \left[ \ ({\tt arg-list}) \ \right] \\ function{-}body \\ {\tt endfunction} \end{array}
```

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

Basic Matrix Manipulations

Dasic Manix I	vrampulations
rows (a)	return number of rows of a
columns (a)	return number of columns of a
all (a)	check if all elements of a nonzero
any (a)	check if any elements of a nonzero
find (a)	return indices of nonzero elements
sort (a)	order elements in each column of a
sum(a)	sum elements in columns of a
prod(a)	product of elements in columns of a
min (args)	find minimum values
max (args)	find maximum values
rem (x, y)	find remainder of x/y
reshape (a , m , n)	reformat a to be m by n
diag(v, k)	create diagonal matrices
linspace (b, l, n)	create vector of linearly-spaced elements
logspace (b , l , n)	create vector of log-spaced elements
eye (n, m)	create n by m identity matrix
ones (n, m)	create n by m matrix of ones
zeros (n, m)	create n by m matrix of zeros
rand (n, m)	create n by m matrix of random values

Linear Algebra

0	
chol (a)	Cholesky factorization
det (a)	compute the determinant of a matrix
eig (a)	eigenvalues and eigenvectors
expm (a)	compute the exponential of a matrix
hess (a)	compute Hessenberg decomposition
inverse (a)	invert a square matrix
norm(a, p)	compute the p-norm of a matrix
pinv (a)	compute pseudoinverse of a
qr (a)	compute the QR factorization of a matrix
rank (a)	matrix rank
schur (a)	Schur decomposition of a matrix
svd (a)	singular value decomposition
syl(a, b, c)	solve the Sylvester equation

Equations, ODEs, DAEs, Quadrature

*fsolve	solve nonlinear algebraic equations
*lsode	integrate nonlinear ODEs
*dassl	integrate nonlinear DAEs
*quad	integrate nonlinear functions

perror (nm, code) for functions that return numeric codes,
print error message for named function
and given error code

* See the on-line or printed manual for the complete list of arguments for these functions.

Signal Processing

fft (a)	Fast Fourier Transform using FFTPACK
ifft (a)	inverse FFT using FFTPACK
freqz ($args$)	FIR filter frequency response
sinc(x)	returns sin $(\pi x)/(\pi x)$

Image Processing

colormap (map)	set the current colormap
gray2ind (i, n)	convert gray scale to Octave image
image (img, zoom)	display an Octave image matrix
imagesc (img, zoom)	display scaled matrix as image
imshow (img, map)	display Octave image
imshow (i, n)	display gray scale image
imshow (r, g, b)	display RGB image
${ t ind2gray}$ (${ t img}$, ${ t map}$)	convert Octave image to gray scale
ind2rgb (img, map)	convert indexed image to RGB
loadimage $(file)$	load an image file
rgb2ind (r, g, b)	convert RGB to Octave image
saveimage ($file$, img , fmt	, map) save a matrix to $file$

Sets

$create_set(a, b)$	create row vector of unique values
complement (a, b)	elements of b not in a
intersection (a, b)	intersection of sets a and b
union (a, b)	union of sets a and b

Strings

strcmp (s, t)	compare strings
strcat(s, t,)	concatenate strings

C-style Input and Output

fopen $(name, mode)$ fclose $(file)$	open file name close file
printf (fmt, \ldots)	formatted output to stdout
fprintf (file, fmt,)	formatted output to file
sprintf (fmt,)	formatted output to string
scanf (fmt)	formatted input from stdin
fscanf (file, fmt)	formatted input from file
sscanf (str, fmt)	formatted input from string
fgets (file, len)	read len characters from file
fflush (file)	flush pending output to file
ftell (file)	return file pointer position
frewind (file)	move file pointer to beginning
freport	print a info for open files
fread (file, size, prec) fwrite (file, size, prec) feof (file)	read binary data files write binary data files determine if pointer is at EOF

A file may be referenced either by name or by the number returned from fopen. Three files are preconnected when Octave starts: stdin, stdout, and stderr.

Other Input and Output functions

save $file \ var$	save variables in file
load $file$	load variables from file
disp (var)	display value of var to screen

Miscellaneous Functions

eval (str) feval (str, \ldots)	evaluate str as a command evaluate function named by str , passing remaining args to called function
error (message)	print message and return to top level
clear pattern exist (str) who	clear variables matching pattern check existence of variable or function list current variables

Polynomials

compan (p)	companion matrix
conv(a, b)	convolution
deconv(a, b)	deconvolve two vectors
poly (a)	create polynomial from a matrix
polyderiv (p)	derivative of polynomial
polyreduce (p)	integral of polynomial
polyval (p, x)	value of polynomial at x
polyvalm (p, x)	value of polynomial at x
roots (p)	polynomial roots
residue (a , b)	partial fraction expansion of ratio $\left.a\right/b$

Statistics

corrcoef(x, y)	correlation coefficient
cov(x, y)	covariance
mean (a)	mean value
\mathtt{median} (a)	median value
std (a)	standard deviation
var (a)	variance

Basic Plotting

```
    gplot [ranges] expr [using] [title] [style]
    2D plotting

    gsplot [ranges] expr [using] [title] [style]
    3D plotting

    ranges
    specify data ranges

    expr
    expression to plot

    using
    specify columns to plot

    title
    specify line title for legend

    style
    specify line style

If ranges are supplied they must come before the expression
```

If ranges are supplied, they must come before the expression to plot. The using, title, and style options may appear in any order after expr. Multiple expressions may be plotted with a single command by separating them with commas.

 set options
 set plotting options

 show options
 show plotting options

 replot
 redisplay current plot

 closeplot
 close stream to gnuplot process

automatic_replot built-in variable

Other Plotting Functions

plot (args)	2D plot with linear axes
semilogx (args)	2D plot with logarithmic x-axis
semilogy (args)	2D plot with logarithmic y-axis
loglog (args)	2D plot with logarithmic axes
bar (args)	plot bar charts
stairs (x, y)	plot stairsteps
hist (y, x)	plot histograms
title (string)	set plot title
axis (limits)	set axis ranges
xlabel (string)	set x-axis label
ylabel (string)	set y-axis label
grid [on off]	set grid state
hold on off	set hold state
ishold	${\tt return}\ 1\ {\tt if}\ {\tt hold}\ {\tt is}\ {\tt on},\ 0\ {\tt otherwise}$
mesh (x, y, z) meshdom (x, y)	plot 3D surface create mesh coordinate matrices
