Processor Performance

The following comparisons are processor intensive comparisons; application throughput (which utilizes all subsystems) will have less of a difference.

The **80386 SLC** at **25 MHz** is (325T):
- ☞ Equivalent to a 33 MHz 386 DX

The **80486 SLC2** at **40/20 MHz** is (Upgrade for 56/57 SX & 56/57 SLC):
- ☞ Up to 3.71 times faster than a 20 MHz 386 SX with no memory cache
- ☞ Up to 99% faster than a 20 MHz 386 SLC (Model 56 SLC & 57 SLC)
- ☞ Equivalent to a 25 MHz 486 SX

The **80486 SLC2** at **50/25 MHz** is (9556/9557 SLC2):
- ☞ Equivalent to a 33 MHz 486 SX

The **80486 SLC3** at **60/20 MHz** is:
- ☞ Up to 4.24 times faster than a 20 MHz 386 SX with no memory cache
- ☞ Up to 187% faster than a 20 MHz 386 SLC

The **80486 SLC3** at **75/25 MHz** is:
- ☞ Up to 32% faster than a 486 SX at 33 MHz
- ☞ Up to 40% faster than a 486 SLC2 at 50/25 MHz
- ☞ Up to 113% faster than a 486 SX at 25 MHz

The **80486 DX2** at **50/25 MHz** is:
- ☞ Up to 70% faster than a 486 SX/DX at 25 MHz
- ☞ Up to 20% faster than a 486 DX at 33 MHz

The **80486 DX2** at **66/33 MHz** is:
- ☞ Up to 70% faster than a 486 SX/DX at 33 MHz
- ☞ Up to 20% faster than a 486 DX at 50 MHz

The **Blue Lightning**™ at **50/25 MHz** is:
- ☞ 7% faster than a 486 DX2 at 50/25 (integer performance)
- ☞ 2% faster than a 486 DX2 at 50/25 (92% integer, 8% floating pt)

The **Blue Lightning** at **66/33 MHz** is:
- ☞ 5% slower than a 486 DX2 at 66/33 (integer performance)
- ☞ 9% slower than a 486 DX2 at 66/33 (92% integer, 8% floating pt)

The **Blue Lightning** at **75/25 MHz** is:
- ☞ 33% faster than a 486 DX2 at 66/33 (integer performance)
- ☞ 26% faster than a 486 DX2 at 66/33 (92% integer, 8% floating pt)

The **IntelDX4**™ at **75/25 MHz** is:
- ☞ 50% faster than a 486 DX2 at 50/25 MHz

The **IntelDX4** at **100 MHz** is:
- ☞ 50% faster than a 486 DX2 at 66/33 MHz
- ☞ 200% faster (3 x faster) than a 486 SX at 33 MHz

The **Pentium**™ at **60 MHz** is:
- ☞ Up to twice as fast as a 486 DX2 at 66/33 MHz
- ☞ Floating point performance is up to five times faster than a 486 DX's math cop.

The **Pentium** at **90/60 MHz** is:
- ☞ 50% faster than a Pentium at 60 MHz
- ☞ Slightly faster than the PowerPC 601 at 80 MHz for integer performance
- ☞ Slower than the PowerPC 601 at 80 MHz for floating point performance

The **PowerPC 601**™ at **66 MHz** is:
- ☞ Falls between a 486 DX2 at 66/33 MHz and Pentium at 66 MHz processor for integer performance (SPECint92 for Pentium: 70; SPECint92 for PowerPC 601: 62)
- ☞ Faster than a Pentium processor for floating point performance (SPECfp92 for Pentium: 56.9; SPECfp92 for PowerPC 601: 72)

BAPCo uses commonly available software applications.

Norton Utilities® System Information version 6.0 is CPU intensive without requiring math coprocesor.

Intel's iCOMP™ is made up of 16 bit integer (67%), 16 bit floating point (3%), 32-bit integer (25%), and 32 bit floating point (5%).

SPECint92 is a 32 bit industry standard CPU benchmark. Measurements made with L2 cache.
