
HP Site Design and Implementation

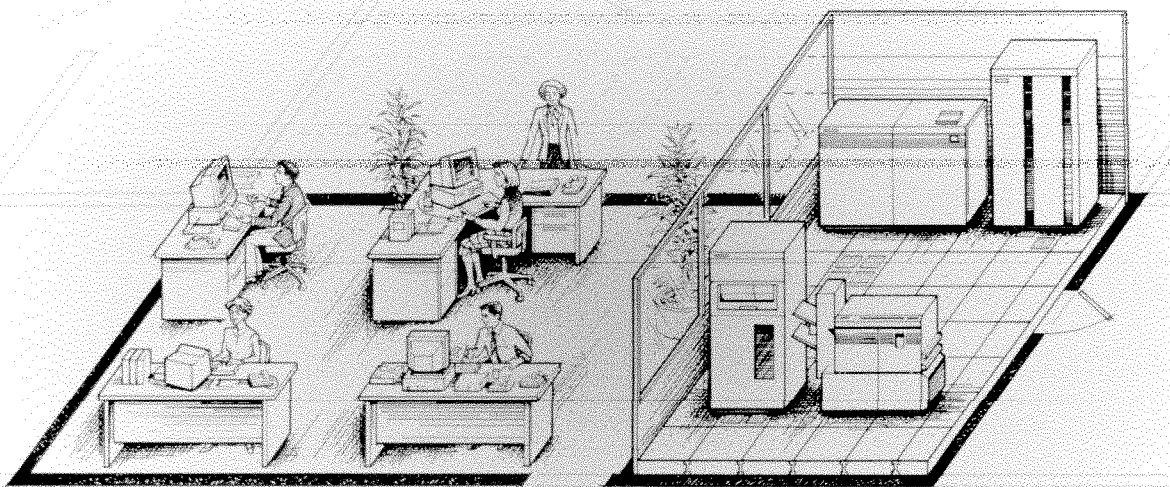

Preparing your computing environment for today's challenges and opportunities

Whether you're setting up a new computing environment for your company or moving an existing one, your first decision should be to call Hewlett-Packard.

HP is in the information systems business, so we have experience with the issues you're most likely to encounter—everything from preparing an optimal computing environment to troubleshooting an environmental problem.

Based on a thorough needs analysis, our technical experts work with you to develop the best solution to meet your business requirements. HP manages all aspects of each project, within the scope you define, so you minimize the complication of dealing with multiple vendors. And by working with an industry leader in support services, you can be confident that the job is done to your high standards.

Most importantly, you can be certain that your computing environment is prepared for today's challenges and opportunities.

Understanding your unique situation

Your computing environment reflects the unique nature of your business. That's why our project managers work closely with you to understand your business issues and concerns. Then they propose a custom solution that fits your goals and schedule.

HP's worldwide resources can benefit companies of every size and type—from specialized regional companies to diversified multinational corporations. And HP's considerable experience keeps projects in many types of environments, including multivendor, on track and within budget.

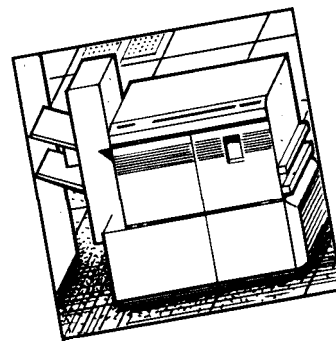

Working with you from concept to completion

Designing a computing environment and implementing that design can be a complex process, particularly if multiple vendors and contacts are involved. That's why HP assigns a project manager as your single point of contact. HP project managers have the knowledge and experience to efficiently manage the resources you need to keep your project running smoothly.

Collaborating with your team, the project manager helps you identify critical needs, define responsibilities, and establish project controls to ensure a smooth, timely implementation. Regular status meetings and reports keep you abreast of the progress.

Finally, when the work on your computing environment has been completed, HP provides you with comprehensive documentation to ensure smooth ongoing operations.

Applying a broad spectrum of capabilities

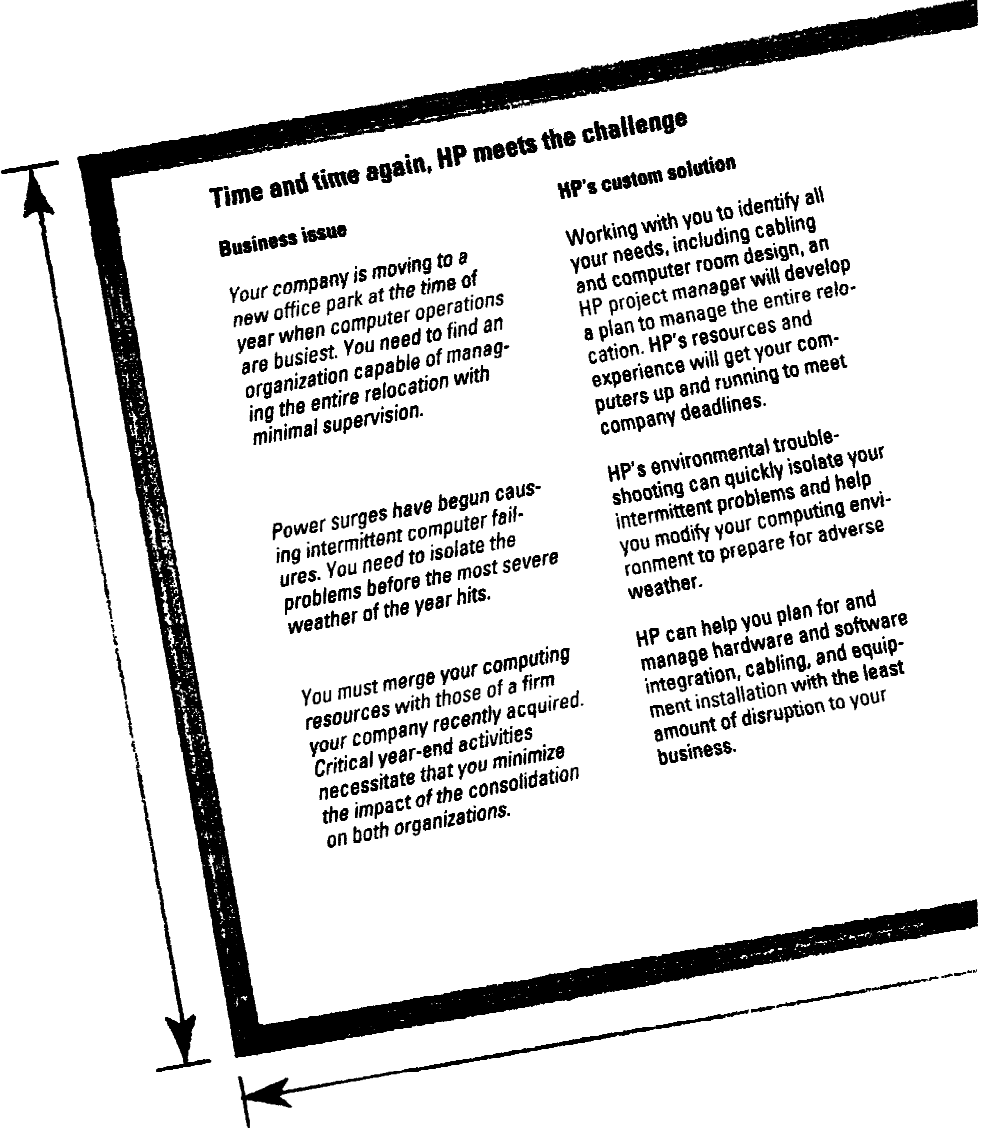

By effectively orchestrating HP's broad range of services and capabilities, HP project managers deliver custom solutions that meet the specific needs of your business.

Best of all, whether your new or modified computing environment requires cabling, relocation, network installation, design and preparation, or environmental troubleshooting, we can start working together on your custom solution as soon as you call HP.

Taking the first step

Call us today for more information on how HP can help you with your site design and implementation needs.

Your HP representative will work with you to define the right combination of services and capabilities to best meet your business needs and strengthen your computing environment.

Time and time again, HP meets the challenge

Business issue

Your company is moving to a new office park at the time of year when computer operations are busiest. You need to find an organization capable of managing the entire relocation with minimal supervision.

Power surges have begun causing intermittent computer failures. You need to isolate the problems before the most severe weather of the year hits.

You must merge your computing resources with those of a firm your company recently acquired. Critical year-end activities necessitate that you minimize the impact of the consolidation on both organizations.

HP's custom solution

Working with you to identify all your needs, including cabling and computer room design, an HP project manager will develop a plan to manage the entire relocation. HP's resources and experience will get your computers up and running to meet company deadlines.

HP's environmental troubleshooting can quickly isolate your intermittent problems and help you modify your computing environment to prepare for adverse weather.

HP can help you plan for and manage hardware and software integration, cabling, and equipment installation with the least amount of disruption to your business.

For more information, call your local HP sales office listed in your telephone directory or an HP regional office listed below for the location of your nearest sales office.
