

## AVI Constructor 1.7.4 Changes:

- The make compress true color and 256 AVI menus were removed.  
To compress an AVI select "Always ask for compression " in the AVI Options menu.  
This means AVI constructor will ask for compression each time you request to make a 256 or true color AVI.
- AVI Constructor can now build AVI files from Targa files (\*.TGA).
- Added True Color support to all the misc. AVI menus. (negative, adjust to color, etc.)
- renamed various menu names.
- moved various menus to different locations.
- Added more AVI Building menus.
- Better exception handling.
- Make AVI from a text file now ignores files that are not found (or lines that are not files ).
- Auto-appends "AVI" in the save dialog if you didn't type it.  
etc.

## AVI Constructor version 1.7.4 fixes the following problems:

- Fix a bitmap (\*.BMP) loading problem (error: unable to find ... temp.bmp).
- Fixed the problem of selecting multiple frames at the same time the frame rates would change.
- Palette problems when viewing images in 256 color mode with other graphical applications running.

Please let me know if you have any problems with this version

---

## AVI Constructor 1.6 Additions:

### AutoPaste

AutoPaste lets you automatically add new images to AVI Constructor when you copy the image from another application to the clipboard.

To turn autopaste on, go to the "options" menu and click on "Autopaste new images from the clipboard."

To turn autopaste off, do the same as above.

### New Make Menus

- New make menus that build an AVI from a file list (a list of files in a text file).  
You can see this new make menu in the file menu.

**Set all frame rates to 1 was added to the list menu.**

### Printing

You can now print images the size as they appear on the screen or fit them to the printers page.

Print all means that all images will be printed.

If you to print all the image *in rows or columns* all the images will be adjusted to the size of the first image.

**Copy, Print, or Save images from the add images window when previewing an image.**

You can now copy or print an image when previewing it from the the add images window by using the "image" menu on AVI Constructor's main window.

- New make buttons for make true color compressed AVI and make AVI assuming same format (size/color format) as first image.

#### **Problems discovered from other users:**

One user was using compressed RGB bitmaps created by Corel Draw 7. AVI Constructor doesn't support compressed RGB bitmaps. (In some cases, it will support 8 bit compressed bitmaps.)

Another user was using JPEG files created using a cropping utility (PicturePREP) that comes with the Snappy product. The JPEG files created using this utility also do not seem to work well with AVI Constructor.

AVI Constructor supports only JPEG files created using the method of the Independent JPEG Group's JPEG library code.

#### ***END OF AVI Constructor Version 1.6 details.***

#### **AVI Constructor version 1.5.2 fixed the following problems:**

##### **Make True Color AVI**

Fixed.  
(This didn't work in the win 3.1 version.)

##### **Capture Window**

( Save Clipboard image = Print Image, etc)  
( Save Image gave an extra dialog.)  
Fixed many problems with the capture window.

##### **Negative 16 color menu**

Didn't work in the last version.  
Fixed.

##### **Random 16 color menu**

Didn't work in the last version.  
Fixed.

##### **Clipboard Menu**

There was a problem when saving the clipboard image.  
(Would save as a bitmap image but then gave an extra save dialog.)  
Fixed.

##### **Access Violation when Closing.**

Fixed.

## **AVI Compress**

The Win 95 version AVI Compress now shows a percent gauge instead of "Working."  
Also fixed a problem with the hourglass cursor.
