

reamLight Verttice Installation

System Requirements

A Macintosh computer with at least a 16 color (4 bit) or grayscale monitor.

At least 2 Meg of free RAM, preferably 4 Megs.

System 7.0 or later (works with System 6.0.5 or later but you may notice minor problems)

The Verttice Package

If you don't see the icons on your Desktop, rebuild the Desktop. (Reboot and hold down **⌘-Option**)

DreamLight® Verttice™.sea (color icon with system 7 only):

This is the full Verttice package and is a self-unstuffing archive.

Double-click on it to install the program on your hard disk.

Once installed, the files are:

DreamLight® Verttice™ Folder (custom icon in system 7, Folder icon in System 6):

This folder contains all the parts of Verttice.

DreamLight® Verttice™:

This is the Verttice application. Double-Click on the icon to start Verttice.

DreamLight® Verttice™ Manual:

This is the manual you are currently reading. It is a self contained document.

You can access it from the Finder or by pressing the Help button in Verttice.

DreamLight® Verttice™ Prefs:

This preferences file will be created the first time you play.

This is where the player information is stored.

To avoid problems, keep these files in the Verttice folder and don't change their names.

If you get a message that there is not enough memory, or experience any other problems running Verttice, please refer to the troubleshooting section later in this manual.

Don't forget to Register

You may try Verttice free of charge. If you like it and wish to keep it, please print the Registration form later in the manual; fill it out; and mail it with \$24.95 (US) to DreamLight Incorporated.

We will put you on our mailing list. If the response from this package warrants, we have many more ideas that we would like to release as high quality shareware...
