How to backup files:

Before editing any system files, it is always a good idea to backup files. This is so that if anything goes wrong with your system as a result of the changes you make, you can simply restore the file. To backup your system.ini file (the first file you need to make changes to), do the following:

- 1) Go to a DOS prompt.
- 2) Type in "cd\" (without the quotations) and hit Enter.
- 3) Type in "cd windows" and hit Enter. You should get the c:\windows> prompt.
- 4) Type in "copy system.ini c:\windows\system.bku" and hit Enter. You will now have a new file, system.bku, in your windows directory. It's contents will be exactly the same as your system.ini file. With this file backed up, it is now safe to edit your system.ini file.

To edit your system.ini file, do the following:

- 1) Go to a DOS prompt.
- 2) Type in "cd\" and hit Enter.
- 3) Type in "cd windows" and hit Enter.
- 4) Type in "edit system.ini" and hit Enter.

You should now get a blue screen with writing on it.

5) Notice how this file is divided up into different sections, with the headings of the various sections being in square brackets (ie []). Scroll down this file (you can use the down arrow key on your keyboard) and see if you can find a section with the heading: [386Enh]. If you find this heading, look through this section carefully and see if it has a line that says: Device=vshare.386 If this line is missing, add the line to the beginning of this section of the system.ini file (right under the [386Enh] heading).

Now save the file by hitting Alt-F and choosing Save. Then exit the file by hitting Alt-F and choosing Exit. Reboot your system and try The Ultimate Game Collection once more. If you are still getting the same error message, go to Step 6.

6) Open your system.ini file again, following steps 1 to 4 above. Go to the [386Enh] section of the file again. Look through this section of the file again to see if it has a line that says: Device=*vshare If this line is missing, add the line to this section of the system, under the line that says device=vshare.386. Now save the file again. Exit the file. Restart the computer and try The Ultimate Game Collection. If it still is not working, go to Step 7.

- 7) Go to a DOS prompt.
- 8) Type in "cd\" and hit Enter.
- 9) Type in "copy autoexec.bat c:\autoexec.bku" and hit Enter. This will backup your autoexec.bat file.
- 10) Type in "edit autoexec.bat" and hit Enter. You should now get a blue screen with writing on it.
- 11) Look for a line that has the word "share" in it. If you do not see it, add the following new line to your autoexec.bat file: c:\dos\share.exe /L:500

Once this line has been added, save the file and then exit the file.
12) Reboot your system and try the The Ultimate Game Collection again. It should now work.

If you are having problems with your system as a result of the changes you made and want to restore your original system files, do the following: To restore your system.ini file:

- 1) Go to a DOS prompt.
- 2) Type in "cd\" and hit Enter.
- 3) Type in "cd windows" and hit Enter.
- 4) Type in "copy system.bku c:\windows\system.ini" and hit Enter. If you are prompted to Overwrite, choose "y" for yes. Your original system.ini file will be restored and you can reboot your system.

To restore your autoexec.bat file:

- 1) Go to a DOS prompt.
- 2) Type in "cd\" and hit Enter.
- 3) Type in "copy autoexec.bku c:\autoexec.bat" and hit Enter. If you are prompted to Overwrite, choose "y" for yes. Your original autoexec.bat file will be restored and you can reboot your system.
