What's New in Version 2.0j?

● This file contains information on the new features and changes to versions of WigWam and Powwow it goes accross all services. It's a cumulutative sort of thing.

.

Date   : 24 - August - 1994

2.00j Changes from 2.00i

.

● Telnet to Compuserve added. CIS.EXE modified to take this into account
● Telnet to Compuserve added. wwnet.exe modified to add this option under the communications settings dialog
● Z-Modem resume added to CIX.EXE
● Block-write added to CIX.EXE for hopefully improved performance (requires an addition to tp.ini to be input manually)
● Corrected the MSL script to cope with new menus
● Stack depth increases to hopefully remove all crashing problems when viewing file lists/library lists/resumes etc.

2.00I Changes from 2.00h

.

● Removed need to wait for CompuServe Incorporated from Connection scripts (Cure for ziffnet problems)
● Increased the limit in convrt.exe from 2000 messages to 4000 messages to cope with a lot of new messages in a forum at once.
● Corrected the problem that caused people to join ectf forum
● Corrected the weather script
● New CIX.EXE without the multiple "error" messages
● New CIX.EXE allowing more than 25 files downloadable
● New CIX.EXE without the screen corruption
● New WWNET.EXE that corrects for the problem withexternal email addresses on CIX
● New ADDCONN.EXE that corrects the problem with external email addresses on CIX

2.00h Changes from 2.00g

● Allowed 'Set CIS Options' to be selected when joined to any service - ie you don't have to be in the CIS service to do it.
● Removed GPF when trying to create a local conference from an empty messagebase.
● Fixed Divide by 0 problem when window is resized to a very small size.
● Fixed problem with deleting users deleting other files as well.
● Fixed problem with moderators joining local users to closed confs not working.
● Changed brand to check that it can actually find the brand information and complains loudly if it can't.
● Added service aliases. Extra line in [tpopts] Aliases=xyz. eg. 'xyz=fred=cix;work=remote'

- Fixed problem with WW hanging if viewing a message which is a comment to itself.
- Fixed problem with creating new confs/topics sometimes putting the message in the the .bsc file instead. This was a nasty.
- Fixed problem with copying/creating users giving other users access to original users local mail.
- Improved error messages in the comms modules to let the user know what's going on.
- Fixed focus problem with modify conference dialog.
- Changed add participants to set all messages as unread.
- Left more space for message numbers. 6->7 required for CIS.
- Changed addcon so that it remembers it's last position on screen.
- Fixed addcon status dialog so that it has 3d group boxes.
- Changed overwrite library lists checkbox to be sticky in CIS.
- Number of unread msgs after manual addcon is now fixed.
- Letter 'y' being added to forum names if using 'download own messages' is now fixed.
- Sorted problem with CIS comms grabbing focus whenever a status dialog opens.
- Changed login dialog to set focus to password if no password has been entered.
- Fixed install routine so that it only asks for comms settings with real services = ie with a <serv>int.cnf file.
- 'Network Names' now does auto registration of new users if self-registration is enabled.
- Checked that 'defer' works okay - seems to.
- Hopefully fixed compressing scratchpads problem.
- Extra check in addcon to stop mail messages becoming comments to themselves.
- Changed pollperiod a bit so it should auto refresh after posting messages.
- Fixed location of usrlock so that it always goes in the message path not just current directory.
- Checked build is okay with merging 0eneral + general etc back together
- Added support for 'you have binmail:' message as well as 'Binmail:'
- Fixed problem with running WW when with PM set to minimize on use.
- Fixed problem with address book with local user ids.
- Non-sticky .SEL files fixed.
- Resign CIS forum no longer clears all selections.
- Added salt timer to a few more places - need list of other places that you want it.
- More information on 'Message xyz #nnn is not found' - includes topic name.
- Check file lock problem if user sitting on topic tries to do something to it.
- Fixed problem with removing entries in the moderator flist.
- Disabled 'say' when in mail.
- Selected local resign should no longer leave WW in an unstable state.
- Fixed mismatch of listbox sizes in the join dialog.
- Added check for share at startup. (only on file locking enabled systems)
- Fixed problem with wait cursor at login dialog.
- Added 'SET TERM DUMBCRT' on CIS to stop losing settings.
- Fixed problem with addons interface not working when closing down.
- Changed CIS comms so that when commenting to scrolled messages it sends the return mail with forum/section and message number details.
- Disabled remote resign on cis since it didn't really work.
- Fixed problem with CC's to local user when posting from other service.
- Stopped addcon asking for localint.cnf when importing sometimes.

- Stopped copy of scratchp whilst online. YES!
- Increased size of script and modify flist dialogs - but still okay on standard VGA.
- Fixed problem with copying users reseting own settings. (myself=TRUE)
- Fixed problem with no reply marker on CIS mail messages. (minrep[0]==0)
- Stopped message too long to display message from popping up. The message now appears in the status line - this also fixes the problem with the mouse button sticking down and selecting other messages.
- Changed build so that if you cancel it you are forced to run build again before you continue. (It also backs conf.ww upto confww.bak before doing a build) This stops the problem with people being auto-resigned from topics and losing the read/unread flags.
- Reduced program size by about 100k by using pascal functions instead of C ones.
- Changed editor so that it doesn't get stuck in an infinate loop when the user tries to import a file that is too big.
- Popup menu on the editor - use the right mouse button.
- Added simple wordstar compatible commands ^T/^Y/^A/^F to delete word,delete line, move to home, move to end of line.
- Checked that new messages are always flagged as unread esp when using the fetch full msgs on CIS - seems okay.
- Fixed problem with toggle ReadOnly/ReadWrite on topics.
- Fixed bug in cis pcweek script command and included new cixint.cnf from taz.
- GPF on view resumes - can't reproduce this as yet. However it's a display driver problem - esp on S3's. I have noticed that the program's stack seems quite deep on all the drwatson's I've received, I've increased the stack and it appears to be working fine.
- Changed workgroup involvement so that it works on cis id numbers as well.
- Added another stocks script to CIS. (add QSCRIPT.SCR) to allow user to enter which ticker symbols to use.
- Fixed pcweek script and added a macweek script to CIS. (add MACWEEK.SCR)
- Changed review to default to last item in the list.
- Fixed upload notification message to only include the filename not the path as well.
- Added enhanced billing option to CIS. (add ENHBILL.SCR)
- Fixed problem with UKMAPS.SCR script for CIS.
- Added extra scripts for the American Academic Encyclopedia on CIS and also Grolier's Dictionary - results are put into the encyclopedia/reports and dictionary/words conferences.
- Fixed problem with actions not always being deleted from selective connects.
- Changed Ctrl-Pageup/Ctrl-Pagedown to move message bar instead of just scrolling.
- Fixed problem with closing down a minimised WW with addons installed.
- Re-ordered scripts for CIS as Brandy's suggestion.
- Tweaked PCWEEK/MACWEEK scripts to go back to CIS from Ziff.
- Fixed problem with focus/modal dialogs on creating/removing topics.
- Fixed problem with trying to cancel when logging in as a new user causing the user to get stuck in a loop.
- Changed 'Address' field to 'Email address' as suggested by Ed.
- Fixed small problem with posting private messages to forums that don't support it.
- Changed share message to include info about VSHARE.386 as well.
- Limited size of 'To' field when doing a say on CIS to 24 chars.
- Increased message number limit from 1m to 100m - required for issues forum etc.

- Added streaming to z-modem uploads makes it faster uploading stuff, also reports more information as to what is happening

2.00g Changes from 2.00f

- Fixed problem with set cis options not being sticky.
- Fixed problem with share problem on cis connects.
- Fixed problem with fetching full threads - caused share problem.
- Fixed network name stuff to support lantastic.
- Fixed cis comms
  Case insensitive for prompts.
  Copes with the new multi-page what's new menus.
  Uploads now default to overwrite.
  Better support for 8-bit messages. (nightmare)
  Fixed init.scr to set quick b downloads. (requires set cis options)
  Fixed a few redundant actions.
  Hopefully fixed cannot read message error.
  Fixed version number of comms module.
  Fixed problem with short file descriptions (Full not checked)
- Workaround for mail bug in cix - will quit mail and reenter after 6 mail messages have been posted.
- Fixed some duplicated accelerators in menus/password dialog.
- Fixed share problems with msg.ed on local drive without share loaded.
- Auto generates conf.ww if it doesn't exist.
- Doesn't prompt user build y/n on initial entry.
- Arial 11pt is default font.
- Fiddled with default colours - didn't find anything better for 16 colour mode.
- Extra help menu item - for NETADMIN.HLP
- Supports LAN manager and workgroups login names.
- Problem with CIS comms not working fixed.
- Added forum filename to dialog.
- Fixed problem with local mail on PW getting corrupted.
- Fixed problem with manual uploads/downloads on CIS.
- Downloads from forums are now logged to TPC.USE properly.
- Alert box shown if not found when searching for text.
- Message displayed when user has not entered a name when joining a forum.
- Fixed problem with creating new local conferences putting message into wrong topic.
- Fixed problem with losing ZNT library lists.
- Goto Message number no longer puts up a error box if you enter nothing.
- Incorrectly addressed mail on CIS now returns with an error message.
- Fixed problem with joining CIS forums.
- Increased length of service brand to allow upto 120 chars. (Requires new brand)
- Faster importing of cixnews messages. Delete usenet.ww it is no longer needed.
- Fixed problem with TAB keys on the editor window. (shift-tab now works as well)
- Tabs in the editor now work from the left margin rather than blindly sticking 8 spaces in.
- Fixed problem with keymacros failing to load (startup macros etc)
- Special fix for PCPLUS forum on CIS.

- 3D effects on editor window.
- Grayed out the To and Subject fields on the fax window if No Cover.
- Fixed further problems with addcon and auto-marking of headers.
- Fixed problem if CIS header messages having a really useless subject line (*** Header Only ***)
- Fixed 'Edit Any File' to use the associations instead of MS Write.
- Added option to Search/Find to search unread messages only.
- Find now works in thread order rather than message number order.
- Fixed problem with create conference and toggle r/o CIX scripts.
- Fixed problem with editing 0 length flists.
- Changed default font on Review window to Arial cos it looked awful before.
- Fixed problem with long mail cc lists on CIX.
- Added support for second PC PLUS forum menus.
- Added warning to 'Edit Any File' if it doesn't find a file association.
- Changed default import options for CIS - no strip headers.
- Remember to delete your USENET.WW file - it is no longer used by WW and is a waste of space.
- Fixed problem with CISCNVT when canceling file selection causing a QuickWin error.
- Removed unneccessary 'Single' option from Addcon.
- Fixed another problem with the cix scripts.
- Changed warning on zero length Says to return to editor.
- Change behaviour of 'Next Conference' to rotate when all topics are postponed.
- Made service id case insensitive when doing involvement checks.
- Removed 'Copy to all Recipients' prompt to force default.
- Fixed problem with large headers in local mail.
- Added 'Workgroups' colouring - similar to involvement colours but allows you to specify a list of users in your group. Eg put 'taz;ashmount;strum;petec;imagineer;esh' for the cix service and we know when somebody from ashmount has replied.Note that this has another colour setting on the view menu.
- Added 7 bit filtering, strip headers, fast header option to comms setup dialog.
- 7 bit filtering - used for CIS only when people have problems with CIS dodgy 8 bit support.
- Strip Headers - remove old header messages like the 'h' option in addcon.
- Fast headers uses 'SCAN NEW QUICK' instead of 'SCAN' for fetching headers - this has the benefit of only getting the first message in the thread but loses the benefit of auto fetching of CIS headers.
- Changed Edit Any file to use Write if no associations.
- Change Sections to Collect dialog to have options for Full/Headers/Roots/None since I didn't think it had enough dialog controls on it. Also added option to get messages from you.
- Changed upload/erase options so that if you're viewing a 'Binmail:' message then the filename is automatically filled in for you.
- Fixed new problem with auto marking of headers.

2.00f Changes from 2.00e

- Fixed problem with comms modules looking in the wrong directory for TP.INI (didn't use ashmount.ini)

- Restored previous linewrapping code as it could cause other problems. (I'll get round to it)
- Fixed problem with withdraw not repainting the display properly.
- Reinstated the 'Resign' command in single user products. Resign now does a local resign. Delete offers choice of resign on the remote host.
- Fixed focus problem when showing unjoined topics.
- Added some new script commands and fixed some bugs.
- Fixed problem with joining dodgy forums like DELL.
- New CIXINT.CNF to fix messagesize problems.
- Changed UPGRADE to check to see if they're trying to upgrade TPnet or PW 1.xx to make sure they don't do anything silly.
- Merged in 32 bit complian code.
- Removed the umlaut conversion.
- Fixed problem with one space in CIX messages causing optimisation problems.
- Fixed line wrapping of long lines in mail headers (cindy problem).
- Added plings to terminal menus.
- Forced killscratch at start of blink unless it's a manual blink.
- View Replies button is now grayed out accordingly.
- View|Font|Printer now sets font size properly.
- Accelerators on 'Status' window now work (also fixed ENTER problem)
- Fixed problem with comms setup dialog using the current service, instead of the current service selected in the dialog [occurs in multi service versions only].
- Thread list now opens with current message in the centre of browse window.
- Snap-to in Review window now works.
- Search now allows you to limit searches to Bookmarks only [to reduce 'hits'] & removes non-matches.
- WW/PW can now be run on remote drives from *any* drive mapping, provided that WW/PW are not called explicitly.
- Minor modifications to the comms modules.
- Prunefile entries can now be set to nothing: prune will thus throw away all deleted messages if desired.
- Text of the 'Timed Connect' message is now more user friendly.
- If Status Bar is turned off that space at bottom of screen is now used by messages.
- Toolbox should no longer 'creep' to the right.
- NewsNet/UseNet now correctly inserts the 'Message-ID:' into the message text.
- Fixed trashing of 'References:' line when not in usenet.ww.
- Fixed truncation of 'Subject:' line in usenet comments.
- Switching from/to fixed/proportional fonts no longer looses position.
- Added 'n' line to {serv}int.cnf files to permit configurable qline when doing a 'Mail Only' connect.
- Focus on toolbox now returns to main window.
- Status box now correctly displays correct Bookmark set number.
- Reduced the number of screen updates/refreshes and files accesses when mailing/posting messages.
- Addsig now inserts a newline to remove the annoying 'push Sig' feature.
- Ghost flags for Mail are now correctly handled.

- Bookmark file reading routine now removes bookmarks if the messages are no longer in the messagebase.
- Fixed changing View Thread mode: will now only update if actually changing mode.
- Restyled User Option dialog and added a new entry: Recent.
  Recent can be used to limit the size of the thread list and can be used to speed up the thread display in large topics with large threads. Set to '0' for normal behaviour. Set to a numeric value to limit the size of the thread display.
- Prune now correctly displays the number of messages deleted.
- Addcon Helpfile searches now found correctly.
- Fixed failed connect with arc'd scratchpads.
- Fixed cix/cix.lore problem.
- Added Ignore button to Toolbox.
- Fixed [we hope] the Wait Cursor problem.
- Manual download now downloads to the specified download directory.
- Fixed reply bug in mail loosing last recipient of CC'd list.
- Comment to Mail now marks message as read.
- Connect Icons and Hotkeys now do Quick Connects using the first comms setting for service and last phone number used.
- Added Copy Icon.
- Fixed remaining print problems.
- Scratchpad is now deleted before the mail fdir [CIX only] to prevent problems with some scripts.
- Address book now sets highlight on first item in the list.
- Uploads to CIX conferences now automatically CC the conference moderator mail notification message back to the user.
- Fixed Undo bug where Undo went back more than 1 message.
- The 'No' button before a Build now works correctly.
- Joining a new conference on CIX now automatically downloads the 'Show confname' information: this is used by Build to correctly set the Moderator flags for the remote service. This download is forced because at some stage this information will be used to set other features as well.
- Fixed the Invalid Login window when attempting to log in with an invalid command line.
- Speeded up the comms Fcopy routine.
- Key Macro now supports toolbox buttons. Icons/buttons can be attached to a macro. The buttons take the form of bitmaps, to be stored in the main WW/PW executable directory. Button bmp's attached to a macro are then added to the Toolbox and will be available next time you start WW/PW.
  Macro names take the form MACROn.KBD and the BMP name must take the form MACROn.BMP [where n is a number].
- CIS terminal now correctly handles retrieval error messages.
- Addcon is now considerably faster where no PASS.TP exists [i.e. the user{s} do not use encrypted conferences on CIX], especially true for network installations.
