Welcome to the Ashmount Product Family!
This is WigWam 2.

We hope you enjoy your use of WigWam 2 - the world's best Windows OLR - and that you find it a useful productive and money saving tool.

Demonstration copies can be downloaded from CIS [UKCOMMS, Library 12] and CIX [wigwam2/files] and are licensed for 14 days. We encourage you to distribute further copies of the demonstrator to your friends and colleagues but you may not make any charge for doing so, other than a nominal sum for disk costs and duplication etc.

WigWam is only licensed for use by you. You may use your registered copy on more than one machine, e.g. a desktop and a laptop, provided that you only use one of them at a time.

About WigWam & PowWow:

WigWam is the baby of our Windows family, which also include WigWam Multi and PowWow. We also produce Dos versions called TP and TP Net.

Single user WigWam's and TP's are available for many services, including:
> CompuServe
> CiX {CompuLink}
> Open University
> Caucus
> BIX
> Delphi

Additional versions covering other remote host systems will be made available during 1994.

More about the family range:

Wigwam is the base product. WigWam can be upgraded in a simple clean and modular fashion to cover more than one remote service, or to handle more than one local user. From there the architecture can be expanded to operate across local or wide area networks.

Network versions of PowWow [our name for the top end Windows product] can support thousands of users and also provide enormous additional benefits, including local network e-mail and locally hosted private conferences/fora.

WigWam & PowWow are powerful Windows communications and management tools: they are matched by TP and TP Net, their DOS equivalents.

Versions covering additonal operating systems will hopefully be introduced during the latter part of in 1994

Ashmount are specialists in the field of communications and information management. We are constantly producing bespoke versions of our software to meet the unique and specialist needs of a variety of corporate, academic and governmental organisations.

Ashmount software is currently in use by more than 70 of the top 100 companies in the UK.

We would be happy to talk to you or your organisation about *your* particular communications needs. Special version of WigWam are always possible.
