TABLE OF CONTENTS

DESCRIPTION

Taking your work home with you? Then Tarylynn is what you need to synchronise your files quickly and painlessly.

Tarylynn synchronises two folders and all subfolders within. Good for a quick backup to a network drive, or copying files to a laptop. No need to spend time trying to setup a windows briefcase. Because Tarylynn does not depend on a database like briefcase does, backups are more portable, and there is no single point of failure.

If files exist on both sides, the file modified dates are compared and the newer one is copied across. When deleting, files existing on both sides are ignored regardless of modified dates.

Tarylynn can even be scripted for automatic running. Useful for periodic backups, or for copying default user settings for software installation.

Tarylynn also comes with a simple FTP mode. Great for updating webpages or accessing work servers when at home.

INSTALLING

If you obtained this program as a zip file, you must place the files KanastaCorpUtils.dll, KanastaCorpUsrCtrls.ocx and KanastaCorpComCtrls.dll in your \windows\system folder.
The files KanastaCorpUsrCtrls.ocx and KanastaCorpComCtrls.dll **must** be registered using regsvr32.exe. This can be done manually or using the included script register.js.
If you have trouble doing this, you **must** use the install version of the programs instead. We will not entertain support requests in using regsvr32.exe

You should avoid moving the files KanastaCorpUsrCtrls.ocx and KanastaCorpComCtrls.dll. If you do, you must first unregister it using regsvr32.exe /u, and register it again in the new location.

QUICK START

*** *Choosing folders to synchronise* ***

First you must choose which folders you wish to synchronise. Browse thru the left and right folder trees until you find the folders you wish to synchronise.

*** *Viewing contents* ***

This step is optional. You may now press the View files or View differences button to see the contents of the folders you have chosen. A new window will pop up. Here will be listed all the files and folders within the folders you had selected. File size and date information will be filled in for files that exist in both folders selected.

This step may take a long time if the folders you have chosen have many files within them. The progress of each step will be displayed at the bottom of the window.

*** *Choosing how to synchronise* ***

Now you must choose how you wish to synchronise the selected folders. You can:

8   copy files from one side to the other if they are newer or do not exist in the target folder
9   delete files from the target folder which do not exist in the source folder

Hold your cursor over the sync buttons in the middle for a description on what they will do.

This may take a long time if the folders you have chosen have many files within them. The progress of each step will be displayed at the bottom of the window.

*** *Simple example* ***

Say you have some files in C:\Stuff which you wish to sync to your laptop connected as \\Laptop\

10   Create a folder called SyncStuff on your laptop. This will be seen as \\Laptop\SyncStuff
11   Find and select C:\Stuff in the left pane and select \\Laptop\SyncStuff in the right pane
12   Press the button in the middle that looks like +->
13   The files in C:\Stuff will be copied into the SyncStuff folder on your laptop

Now you have done some work on your laptop and want to sync it back to your desktop

14   Find and select C:\Stuff in the left pane and select \\Laptop\SyncStuff in the right pane
15   Press the button in the middle that looks like <-+
16   Any changes you have made will be copied back to C:\Stuff

UNINSTALLING

17   Open the Control Panel by selecting Settings on the Start menu
18   Double click "Add/Remove Programs"
19   Select Tarylynn from the list
20   Press "Add/Remove"
21   Restart computer
