               ThanX!!
                 ----------------------------------------------------------------------
```

1.2 What's my dialer?

                    Dialer is a very little and easy phone diary.

I made it to have always the ability to call my friends, parents,
girlfriends and so on... from my chair in front of my Amiga. With Dialer you
can store as many phone numbers as you want (or better, there's a limit, but
it's over 400 and I don't think you know so many people!!), but it's not

all: you can even dial the numbers directly from your Amiga.

You have two different ways: by
                 modem
                  and by standard
                 audio
                  .

I hope you enjoy this program and it can be useful for you as much as it's
for me!

Dialer is FREEWARE: this means that you can use it as much as you want for
free, but you cannot change it in any part and you must distribute with this
documentation. By the way, if you like it, please let
                me
                 know... and if you
even want to pay a little fee, you'll be welcome!! :-))

1.3 Installation

 INSTALLATION:

Just copy the program where you want!!! To run it, you have to double click
on its icon: very easy, isn't it?

The file with the records is saved in S: and it's called Dialer.dat
  ** Do not change it manually by yourself. **

1.4 How does it work?

               HOW DOES IT WORK?

Dialer has got 4 buttons:

1) ADD Click on it if you want to add a new item to your list. A new window
will pop up, asking you the surname, the name and the phone number. The name
and the surname must begin with an upper case letter, but Dialer will make
it for you if you forget.

2) EDIT Click on it if you want to edit the selected item of the listview
below. A window like the one of "Add" will pop up.

3) DELETE Click on it if you want to delete the selected item of the
listview below. A deleted item cannot be recovered anymore. So, be careful
since no confirmations are asked.

4) DIAL Dial the phone number of the selected item of the listview by audio
or by modem. You ca do it even double clicking on an item of the listview.

Then you can see 2 other buttons to select in which way the phone number
must be dialed:
 –
                   Audio
                    –
                   Modem
                   There's a cycle button to decide if the list of users must be ←
                       sorted by name
or by surname.

Dialer has also got three menu items: 1) INFO It displays some infos about

                   the~author~(me!!)
                   .

2) ICONIFY It iconifies Dialer: its window is closed and a title bar is
opened; click on the close gadget to reopen the Dialer. In this way, you can
have Dialer always in memory and you can run it whenever you want.

3) QUIT I bet you know what it does... :-)))

1.5 Possible problems

                  POSSIBLE PROBLEMS

I hope Dialer is totally bug-free, but I know that no program can be.

               MODEM
               : Dialer seems to have some problems with some modems.

               AUDIO
               : Some speackers change the original sounds and it could cause ←
                   that
        Dialer doesn't work properly.

I hope that's all!

1.6 The author ME!!

 THE AUTHOR

   Michele Berionne
   Via Rubicone 42
   00198   Rome
       Italy

```
    M.Berionne@agora.stm.it
```

Other programs available on Aminet:

```
  dev/lang/Logo1_4.lha
  game/think/Atoms.lha
  util/time/MReminder.lha
  game/shoot/fantasy.lha
  game/think/Manos.lha
  game/think/navalbattle.lha
  game/shoot/in_the_target.lha
```

Future projects:

```
  SnailRace      (quite finished and soon available)
  MReminder2     (with a lot of new great features)
```

1.7 ThanX!

```
 THANX!
```

I must thank:
   Oliver Hitz   The real dial program is made by him.
   Pietro Ghizzoni   The GuiExtension is GREAT!!!! :-)))

I want even to add:
   Amos and all "Amos related people"

That's all: they aren't a lot, but for such a simple program, I don't want
to make a very long list!!

1.8 Audio

```
 AUDIO
```

If you selected the audio, Dialer will produce the telephone tones directly
by the standard audio of the Amiga. Pick your receiver up and put it near
the speaker of you monitor, television or hi-fi (if you have it), then let
Dialer dial the number... and it's all right: the number is dialed!!

Easy and funny, isn't it?

1.9 Modem

 MODEM

If you select the modem, Dialer will use it to dial the numbers. You must be
sure that your modem is turned on and that the serial device is free.

As soon as the modem has dialed the number, you can pick your telephone
receiver and hit a key.
