IMPORTANT !  
-----

I'm looking for any information about a certain algorithm developed about this game by J. Murphy. I would appreciate if you get in contact with me if you know it.

### 1.4 The game

The aim of this game is to get four stones of your colour (white) in a row. Rows can be horizontal, vertical, or diagonal.

The player and the computer alternately put a stone on the board. There is gravity, so when you enter a stone into a certain column, it will 'fall down' onto the lowest free place.
