Farallon Announces Licensing of Timbuktu for Windows

Apexx Bundle Enables PCs to Quickly Attach to
Network Users and Resources

ALAMEDA, Calif., February 14, 1994--Farallon Computing, Inc., a
leading supplier of innovative plug-and-play networking products for
Windows and Macintosh personal computers, today announced that
Apexx Technology of Boise, Idaho licensed Farallon Timbuktu(R) for
Windows software. The latest of a growing number of developers to
license Farallon connectivity software, Apexx will bundle Timbuktu
for Windows with its new LocalTalk PC parallel port connector, the
PCTalk Adapter.

"Farallon products are designed to simplify personal computer
networking through innovation," said Alan Lefkof, Farallon president.
"The company actively pursues licensing and OEM relationships with
developers who also are focused on responding to the diverse
communication needs of their users."

"By combining Farallon and Apexx products, Apexx will provide
their portable and desktop PC users with a full-featured personal
networking product that is easy to use," said David Clarke, Timbuktu
product manager for Farallon. "The resulting connectivity kit
complements Farallon's own line of PC networking software and
hardware by providing portable and notebook users with network
communication capabilities."

Farallon Timbuktu for Windows software, which includes
underlying PhoneNET(R) PC technology, enables PC users to easily
access shared network resources such as printers and file servers
and to communicate with other network users through person-to-
person screen-sharing and direct file exchange.

The Apexx PCTalk bundle coupled with Timbuktu enables users
to easily connect to AppleTalk-based networks through a PC parallel
port to directly access other network users as well as resources
such as AppleShare servers, System 7 Macintosh computers and
PostScript printers.

About Farallon
Founded in 1986, Farallon Computing, Inc. is a leading supplier of a family of innovative, plug-and-play networking products for personal computers. Farallon network connectivity products currently have an installed base of more than 4.5 million users. Farallon products are available through distributors and resellers worldwide, as well as through OEM (original equipment manufacturer) and licensing relationships with other computer vendors. Headquartered in Alameda, Calif., Farallon has offices located throughout the world.
