## HSC SHIPS KAI'S POWER TOOLS 2.0 FOR WINDOWS; An Explosive New Version of the Award-Winning Filters and Extensions

HSC Software today announced it is shipping Kai's Power Tools 2.0 for Windows (KPT 2.0), a powerful upgrade of the KPT 1.0 filters and extensions that early users are saying "is light years ahead of the previous version." KPT's new performance features include significant enhancements to all the filters and extensions offering capabilities previously unavailable in any desktop imaging program. KPT's much acclaimed human user interface (UI) now provides faster speed, real time previews for the designer and explorer filters, and features that promise graphic designers remarkable command over their work.

There are further enhancements in the powerful color picker, image extraction preview, new apply modes, new transparency controls, keypad control, a comprehensive Explorer's Guide, and major additions to the Gradient Designer, Fractal Explorer, Texture Explorer and Gradients on Paths extensions.

### Powerful Production and Creation Tools

KPT 2.0 for Windows adds truly new production and image creation tools to PhotoStyler, Adobe Photoshop, the new Corel PHOTO-Paint 5, Fauve Matisse, Fractal Design Painter, Micrographx Picture Publisher and other programs that support the Adobe standard plug-in architecture.

Leading graphic designers worldwide use KPT because it offers significant graphic production capabilities. For examples, noted digital artist C. David Pena produced all the graphics for the 1993 Academy Awards television presentations using KPT. And, according to Joe Libertini of Graphic Imagination, a Carlsbad, Calif.-based graphics design company, "KPT 2.0 is not only light years ahead, it's the most creative program I have ever used. The new interface has easy-to-use, fun control features, allowing speed and total individuality of my creative work. I could live to be 500 years old and never begin to explore all of the creative possibilities this unique tool has to offer."

### System Requirements, Pricing and Availability

KPT 2.0 for Windows requires an IBM PC or compatible, Windows 3.1, and an imaging program that supports the Adobe standard plug-in architecture. KPT 2.0 is available now through HSC's dealers and distributors worldwide for the suggested retail price of \$199. Any registered user of KPT 1.0 may upgrade for \$59.95. Registered users who purchased the program after May 1, will receive the upgrade free (plus shipping and handling).
