

The Super WinBook 98 Viewer is Freeware and may be freely distributed. To read a WinBook just run winbook.exe.

If you do not have winbook.exe, it may be downloaded from the Super Win Software website at <http://superwin.com/super.htm>. After the first time you run winbook.exe, winbook.exe will be associated with the WinBook files (*.swb) and all you have to do to read a WinBook is to run a WinBook file (*.swb).

If setup.exe is included in these files, you may run it to setup the Super WinBook 98 Viewer on your computer.

If you want to produce your own winbook, you will need the Compiler. The Compiler is Shareware and must be registered in order to distribute your winbook. Below is information on ordering the Compiler.

Super WinBook 98 Compiler Order Form #15076
