

**NBB.WRI is the documentation file for *Network Bulletin Board*, version 1.03**  
("Network Bulletin Board," Network Email," and "Email" are trademarks of Ivory Tower Software)  
Updated September 26, 1992

*Network Bulletin Board* from **Ivory Tower Software** is an add-in product for *Network Email*. You can download the latest version of *Network Email* (EMAIL.ZIP) from CIS WinAdv forum New Uploads library.

## ***Network Bulletin Board* Installation**

You must install the *Network Email* program (v. 2.30 or later) before you can use *Network Bulletin Board*.

Copy NBB.EXE to the *Network Email* directory. *Network Bulletin Board* should not be installed as icons in the users' Program Managers. This is because NBB will not run stand-alone: it must be launched from *Network Email* from the "View" menu. NBB shares some of the user options with *Network Email* and for this reason, it is a smaller and more efficient program than if it were programmed as a stand-alone application.

*Network Bulletin Board* will create some .YMB data files in the *Network Email* directory. *Network Bulletin Board* messages are limited to 2048 characters, and when they are two weeks old they are automatically deleted.

## ***Network Bulletin Board* is Shareware**

If you like this add-on program for *Network Email*, your registration fee covers your license for your entire local area network with an unlimited number of users. You will also receive a disk with the latest **registered** version and a telephone number for product support. To register, print the registration form from the "File" "Print" menu, and follow the instructions given there.
