

GlobalOptions Object

The **GlobalOptions** Object provides properties for retrieving information or setting options for an application object. A GlobalOptions Object is obtained from the Options property of the **Application** Object.

Properties

Application - Returns a reference to the Application Object this object is associated with. Read only.

MorePrintEngineErrorMessages - Sets Boolean value indicating more error messages at the application level. Use this object to turn off more error messages if they are switched on by default. It will not affect more print error messages at the report level. Write only.

Parent - Reference to the Parent object (Application Object). Read only.
