Function

An example:

You have just installed a CD-ROM of a magazine. This CD had added a entry in your program-folder as all other CD's before. When you want to start this CD next time, you find a overloaded program-folder and it's hard to find the right entry.

Now comes CD-Master:

After installation you assign the entry in the program-folder to the CD-ROM. If you now remove the CD, CD-Master will archive this entry and will remove to from the program-folder. If you load the CD next time, CD-Master will restore the entry in the program-folder. So entries corresponding to a CD-ROM will only be avaiuable in the program-folder, if the CD is loaded.

Automatische Erkennung

You must explicit assign the folders to the CD. Thats goot, because imagine you installed WordPerfect from CD-ROM and the start-folder is only avaiuable if the CD is loaded. But CD-Master recognize the creation of new entries in the program-folder. If CD-Master recognize a new object, CD-Master ask you next time you choose "Assign objects" to add these objects.

Programm-start

Imagine you want to start your Dicionary on CD every time you load this CD. You can assign a program-execution to every CD and your Dicionary execute automatically.

Anyway you can assign a program-execution to every condition of your CD-Drive (CD-ROM, Audio-CD and "No CD). Instead of an executable file you also can assign a multimedia-file a wave or midi.

Name

You can assign a individuell name to all CD-ROM and Audio-CD's. This name will be viewed, if you stay a while with your mouse on the CD-Master-Icon over the start-bar. You assign the name in the "assign objects"- dialog.

Sharware note

The development of rope software costs time and money. Compilers must, for Tools and secondary literature bought and read is and much knowhow is required. This overhead only then can be operated if it also is rewarded.

I don't equip my programs with expensive Sharware users nerving functions so that an user of Shareware is drawn that he has most helpfully to register himself every 5 seconds. It is for me spares a large praise, if taken advantage of users of you like my programs is. On the praise I alonely however cannot live!

This program is commercialized as Shareware, i. e. you can test it for 6 weeks. You like and you like to use it longer, to have have you registered at the author so and to pay shareware fee this one. An use has the equal status more than these 6 weeks without registration as if you use a pirated copy of a commercial program!

Registration

To the registration you must print the registration form, fill out and send me the registration fee with this one (as cheque). Read before the copyright notes, too.

Pirate copiers pay attention

The CDMaster registers from himself every CD name and serial number, this one CD drive is inserted into this. This adds it to CD lent when inserting of course also he to installation of pirated copies. The CDMaster still knows about this after the clear of the illegal installation!

This program became compiled with Borland C ++ 4.52. The texts the online help became under WordPerfect to 6.1 written. The English texts were translated for the most part with the PONS Personal Translator.

Important

The program was created with largest care and tested. A complete faultlessness however cannot be guaranteed. For possible damage of the system (hard and software) isn't been liable under any circumstances.

DeInstall

You remove CDMaster from her system with the DeInstallation. All files archived and paths are pushed back to her original position at this. All entries in the program and in the program menu is left and the program together with path is deleted.

Attention!

The CDMaster directory is deleted completely with all files and sub directories. If you should well consult the CDMaster directory as root for other programs this is (actually not usual), you shouldn't execute the DeInstallation. This is not valid for of this CDMaster archived files. These become as led above already to her original positions pushed back.

The Deinstallation cannot be made decliningly. Windows is during the Deinstallation '95 ended and started recently. Take care that no programs are open with unprotected data at the time of the DeInstallation.

DeInstallation start

Open you the system preferences window of Windows 95 you find it in the program menu under settings. Choose "software". In the first registration " install/you find the entry Deinstallieren in the list CDMaster 2.0 for Win '95 ". If you mark this entry and push you this one " add/removes" key. The Deinstallation is started now.
