Program Description

PrimaSoft DateTime is a useful freeware Windows 95/98/NT utility that allows computer users with an Internet connection to set their system date and time. It's easy to use and fast. With just a few clicks of your mouse you can fetch the current date and time from an Internet Date/Time host. You can compare new values with your system data and time. Then, you can click on a button to update your PC date and time to match the Internet Date/Time host values.

Getting Started

PrimaSoft DateTime can set your system date and time by connecting to an Internet Date/Time host. Only Date/Time hosts that return a Universal Time (UTC or GMT) can be used. You have to select a date/time host by clicking on the DateTime Hosts list box. Then, click on Get Date/Time and wait until The Current Date and The Current Time boxes display the date and the time. Then, if you want to set your system date and time click on the Update button.

In addition to updating your system date and time, you can set your system Time Zone parameters and Daylight Saving/Standard Time settings. Those parameters are normally set during Windows installation and there is rarely the need to change them.

PrimaSoft Windows 95, 98, NT Software
