Readme file for Winip 2.0 by Dragonmount Networks

Installation
To install Winip, first extract the files from winip.zip (you may have already done this). Then, run Winip20Setup.exe and follow any on-screen instructions. To get started using Winip, you will need to sign up for an account by visiting http://www.dragonmount.net/software/winip/signup.htm.

About Winip
Winip allows internet users to access your computer via a static host name (e.g. mycomputer.nailed.org) even though you may have a dynamic IP address. This lets others access your computer the same way every time, instead of having to enter a different IP address every time you reconnect to the internet. Winip is freely distributed under the Artistic License.

License and Distribution
Winip is open source and is distributed under the Artistic License license. For more information, see the file license.txt.
