

Systronic-15

Changes:

14 April 2003

- First beta release. User pane in start menu has issues.
- Menus from start menu have issues (at the bottom)

Original LiteStep theme designed by [tronn](#), you can view it [here](#)
WindowBlinds skin designed by [Dangeruss](#), sliced, diced and put together in
SkinStudio by [honz](#).

Dangeruss had agreed to help tronn out with a matching WindowBlinds theme, and he designed a superb one in PhotoShop, but unfortunately due to work commitments Russ couldn't finish it off. He pointed tronn towards me.

My thanks go to Dangeruss for allowing me to put his design into SkinStudio and to tronn for asking me to complete the task.

****For best results make sure you copy the hooge 05_53 font to your fonts folder.**

Browse to C:\Program Files\Object Desktop\WindowBlinds\systronic-15 find the hooge0553.ttf file, copy it to C:\Windows\Fonts

Any emails I receive about the font in the taskbar being too small will be ignored as the solution is to install the font.

The icons used in the shellstyle are from [Jimmac's](#) Nautilus set, which is released under [GNU GPL](#)
