

Remote

This dialog can be used to select a remote computer running NTMail and allow the user to remotely configure the NTMail servers on that machine.

The CPL will only connect to the remote machine if the software version on that machine matches that of the CPL.

If the CPL applet is connected to a remote machine, files cannot be written or deleted so some functionality is lost.

domain

Lists

The upper box shows currently selected list and the list settings are editable used tabbed dialogs.

The lower box shows all lists managed by the selected list manager.

The following pages contain list specific settings:

Variables

NTList will check for pre-defined substitution variables in list server help messages. The sequence will be replaced with a value.

The following variables are available:

- Subject: subject of incoming mail message
- From: who the message is from
- To: who the message is to
- Date: date and time of the original message
- Reply-To:
- Cc:
- Sender:
- Priority:
- Organisation:
- Error-To:
- X-Info:
- X-Sender:
- X-Reply-To:

Default Join Message

-Subject: Welcome to the list name list.
-From: <null@default domain> (list name)

To send a message to the list, send an email message to
list name

To leave this list, send an email message to list manager
with the body:
leave list name

If your email address has changed since you joined, you can append your
original email address:
leave list name <old-email-address>

A summary of list processor commands follows:

JOIN <list-name> [<email-address>]

Join or subscribe to the list. A copy of each message sent to the list
will be forwarded to the email address given.

DIGEST <list-name> [<email-address>]

Join or subscribe to the list. A single message will be sent each day
containing an indexed summary of all the messages that have been sent to
the list in the previous 24 hours

LEAVE <list-name> [<email-address>]

Leave or unsubscribe from the list. If your address has changed since
you joined
the list, send your original email address

LIST <list-name> [<order>]

Returns a list of all the email addresses currently on the list. These
may be
ordered by when they joined (default), alphabetically (ALPHA) or by domain
(DOMAIN)

HELP [<list-name>]

Provide help about the list server or about the specified list.

DIR <list-name> [<email-address>]

If directory services are available for the list, send a listing of
all the files that are currently available.

GET <list-name> <file-name> [<email-address>]

Returns the specified file. If the file is an ASCII file, it will be
returned as plain text, otherwise it will be MIME encoded.

Pressing this button will cause the CPL applet to write any outstanding changes to the registry, and then close returning control to the Control Panel.

The caption bar shows the name of the currently connected machine

[General Configuration](#)

[List Managers](#)

[Lists](#)

The screenshot shows the 'NTList : OASIS' configuration window. It features a top menu bar with options like 'Manager Help File', 'Global Settings', 'Key', and 'Services'. Below this is a grid of buttons for 'Join Msg', 'Help Msg', 'Leave Msg', 'Header File', 'Post Allow', 'List Allow', 'Get Allow', and 'Put Allow'. The main area is divided into sections: 'Manager' (with a text field containing 'list' and 'Add/Remove' buttons), 'Managed List' (with a text field containing 'ntmail-update' and 'Add/Remove' buttons), and 'Access Options' (with a table of settings for Join, Post, List, Get, and Put). A 'Membership' section shows a table with columns for 'Total', 'including Digest', 'Barred', and 'Suspended'. At the bottom are buttons for 'OK', 'Cancel', 'Apply', 'SuperList', 'Remote', and 'Help'.

Membership		
	Total	1499
including	Digest	9
	Barred	0
	Suspended	0

Press one of these tabs to configure NTList options and settings

(DOMAIN)

HELP [<list-name>]

Provide help about the list server or about the specified list.

DIR <list-name> [<email-address>]

If directory services are available for the list, send a listing of
all the files that are currently available.

GET <list-name> <file-name> [<email-address>]

Returns the specified file. If the file is an ASCII file, it will be
returned as plain text, otherwise it will be MIME encoded.

Default Leave Message

-Subject: Leaving the list name list.
-From: <null@default domain> (list name)

Thank you for your participation in this list.

access mode

username

Key

This page shows the current software key, along with a description of the facilities enabled by this key.

If the system key is invalid when the CPL applet is activated, the user must enter a valid key in order to proceed.

Default List Server Message

-Subject: NTMail List Server
-From: <null@default_domain> (manager name)

Thank you for requesting HELP about the list services we provide.

This list server is an additional part of NTMAIL and supports the following commands.

LIST SERVER COMMANDS:

This list server will accept one of the following commands:

HELP	This help file.
HELP list_name	Return a description of a particular list.
JOIN list_name	Join a list (the command SUBSCRIBE may also be used).
LEAVE list_name	Leave a list (the command UNSUBSCRIBE may also be used).

The command must be in the FIRST line of the message that you send to the list sever otherwise it will be ignored. All other lines in your mail message will be ignored.

For example, to join the mail list about NTMAIL, you would send a email message to list@net-shopper.co.uk with the following body:

JOIN NTMAIL-UPDATE

manager name

Services

This page allows the user to start, stop or update selected services.

The Apply button can be used to do this immediately, otherwise the user will be asked to confirm this should be done after exiting the CPL applet.

General Configuration

The following pages are used to configure NTList

[Global Settings](#)

[Key](#)

[Services](#)

Global Settings

All List name

All List password

Delete member whose mail is returned

Single file per list message

List Server password

The Apply button is activated if there are outstanding changes on one or more pages.

Pressing this button forces all outstanding changes to be written to the Registry.

It is not necessary to apply all changes before leaving one page for another.

list name

default domain

Pressing this button leads to this file

Pressing this button will cause the CPL applet to discard any outstanding changes and to close returning control to the Control Panel

List Managers

Upper box shows current selected manager.

Lower box shows list of all available list managers

The following page handles list manager settings:

[Manager Help File](#)

Manager

List of existing managers. Selected manager in upper fills managed list information below

Managed List

List of lists managed by selected list manager. Select a list to fill tab dialogs

Super List

Summary

This page summaries the access mode options and the number of list members (including those receiving digests, those suspended and those barred from the list)

The member counts can not be determined if the CPL is connected to a remote machine

Members

A list of members which can be sorted by username, domain or access mode

The list of members can not be displayed if the CPL is connected to a remote machine
