

READ ME - Scan external tool  
Canvas for Windows, version 3.52

The Scan external tool makes it possible to scan images directly into Canvas when using a Windows-compatible scanner that complies with the TWAIN standard.

When the Scan external tool is active, the Scan submenu appears in the Object menu. The Scan external tool's DOS filename is SCAN.CVT.

The Scan external tool is compatible with version 3.51 or later of Canvas for Windows.

---

#### Selecting a scanner

To select the scanner you want to use, use the Select Source option of the Scan submenu.

1. From the Object menu, choose Scan: Select Source.

The Select Source dialog box appears. The names of all scanners connected to your computer appear in the list box.

2. Select the scanner you want to use from the list box and choose the Select button.

The Select Source dialog box closes and the scanner you chose becomes the active scanner.

---

#### Acquiring a scanned image

To scan an image into Canvas, use the Acquire option of the Scan submenu.

1. From the Object menu, choose Scan: Acquire.

A dialog box with scanning options appears. The options in this dialog box depend on the type of scanner you use. Refer to the scanner's user manual for information on these options, and information on using the scanner.

2. Use the scanner dialog box to set your scan specifications and place the scan in your Canvas document.

The image is placed in Canvas as a paint object and can be edited accordingly. Refer to your Canvas for Windows manuals for information on editing paint objects.
