Delete

The "Delete" button can be used to delete references from the model. To delete a particular reference, select it in the list, and press the "Delete" button. If this reference is in use in some edge function, you will get a warning about this.

Find

The "Find" button is used to find the node which the reference is linked to. By selecting a reference in the list and pressing this button, DynRisk will take you to the folder containing the referenced node, and select this for you.

Tip! By assigning references to a suitable collection of nodes, you may use references as an alternative way to quickly navigate through a model. Just bring up the "Show references…" dialog box, select the reference to the node you want to go to, and press the "Find" button.

Show

The "Show" button is used to display the name of the node which the reference is linked to. By selecting a reference in the list and pressing this button, DynRisk will display a message of the following from below the reference list:

"Reference to: <XXX>"

where <XXX> is replaced by the name of the actual node.

Links

The "Links" button is used to find edges where a particular reference is used. To find all the edges using a specific reference, select the reference in the list, and press the "Links" button.
