

Exp

Exponential function. This function lets you calculate e (2.71828182846...) to the power of a linear function of the input value. By using the default parameters, you get a standard exponential function, i.e., $\exp(x)$.

Default parameter values:

$a = 1, b = 1, c = 0$

Example:

$a = 1, b = 1, c = 0$

Input = 4.2 => Output =
66.686

Input = 3.5 => Output =
33.115
